PRESIDENTS BIT

NOW IS THE TIME FOR ALL GOOD MEMBERS TO COME TO AID OF THEIR USERS GROUP. As the length of time increases, since the TEXAS INSTRUMENTS pullout, the ranks of all TI-99/4A USERS GROUPS seem to be dwindling. We are NOT immune to this dilemma. The Group Officers try very hard each month to produce an informative newsletter and an interesting user meeting. We try very hard to keep the members abreast of new hardware and software, including demonstrations, when available. We strive to educate those who want to know and understand the innermost workings of our computer. The turnout at the last meeting was very poor and the Officers are searching for answers on how to get members back to the meetings. WE NEED YOUR HELP. Please take the time to call me or any of the other Officers at any time with suggestions. Feel free to stop me anytime with suggestions on how to regain computer interest in our group. Your suggestion COULD be the one that puts life back into our users group. Be proud of your group and let others know about the MID-SOUTH 99/4A USERS GROUP. Remember, THE TI-99/4A WILL DIE ONLY IF WE BECOME TOO COMPLACENT AND LET IT DIE... IF THIS HAPPENS, WE HAVE ONLY OURSELVES TO BLAME.

ADOLPH BUTLER, our CASSETTE LIBRARY CHAIRMAN, received over one hundred new programs at the last meeting. See him to check on the new things. We are constantly updating the DISKETTE LIBRARY, so check the library at each meeting. For those of you with communications capabilities, the MID-SOUTH 99/4A bulletin board is going strong. It is one of the larger boards in Memphis. It can communicate at 300/1200 baud using TE-II protocols for uploading and downloading. With both GRAPHICS and SOUND capabilities, it has to be rated as one of the finest MID-SOUTH bulletin boards. Again, Lets all strive to keep the Users Group going forward in both education and enjoyment. If everybody pitches in we can assure ourselves a long and prosperous relationship with our computer...

FREWARE UPDATE

99-Calc is now available as FREWARE for the TI. 99-Calc is an electronic spreadsheet program in which you can create your own spreadsheets using row and column titles, numerical values and

formulas.

99-Calc automatically recalculates and displays updated answers when you update an entry on the spreadsheet.

99-Calc runs in Extended BASIC and is available on disk or cassette tape. Instructions are included on the disk or cassette to be printed out on your printer so that you may produce as many copies as you wish. You can save your spreadsheets for future use of updating.

Your spreadsheet can be easily organized to meet your needs having up to 33 rows and 14 columns. Many functions are performed with the press of a commandkey such as "average, compute, delete, help, jump, load, new, print, quit, save and total". 99-Calc comes with a sample spreadsheet which has been saved to help you get started.

To obtain 99-CALC send a blank disk to the address below with a self-addressed return disk mailer with sufficient return postage affixed. (offer expires June 1, 1984) However, if you would rather, just send \$5 cash to cover costs and I will provide the disk, mailer and postage. Please don't forget to include your name and address and specify disk, or cassette. (XD and disk or cassette is all that is required to run program...)

Send materials to:

MISSION VIEJO, CA 92692

CODES-N/L

TI editor or TI formatter ?" that is the question...

Some folks seem to think that the Editor of TIWriter is for writing "Just the facts, Ma" and dully using PF to get a hardcopy for proof reading, then placing transliteration codes into the text and then watch formatter unexpectedly re-arranging your printout.

Using control characters inside your TI Editor text may not be as hard as you think. It gives you as much flexibility to jazz up your printouts as the formatter, and in my opinion, without the fuss. Here's how:

Control "U" (CTRL U) enables the TI Editor to display or send control codes to a device or file. Control codes usually refer to ASCII characters below ascii 32. These codes are standardized in most cases to allow different devices to interpret the codes the same way... "a carriage return is a carriage return is a carriage return". Pressing CTRL U while in the Editor toggles the keyboard in or out of the control key mode (you will see a blinking underline cursor). WALA! the keyboard is not as it seems. Touch any key and strange characters will appear...these are control characters. Getting these characters to perform for you will depend on how your printer interprets these codes.

There are two important tables that you need to cross reference to see what your printer can do. The first is in the appendix of your TIWriter manual (p. 146). The second is in the Users Manual of your printer under Function Code summary (or special character code table, etc). Another table which may come in helpful is the ASCII reference table p.145 of TIWriter's manual or in your

printers manual.

With a little experimentation you can have your printer "doing things you've only read about". For the purpose of simplicity, in the following tables CTRL U SHIFT A means the key input sequence of CTRL U pressed at the same time, and then SHIFT A at the same time.. likewise, FCTN U means keystrokes FCTN U together. Remember that CTRL U also gets you back to the standard key code. If you encounter ESC in the table then replace it with keystrokes CTRL U and FCTN R, which produces an ASCII code value of 27. CTRL U FCTN R can be linked together with other letters or numbers to produce escape code sequences, but be careful, if the sequence requires a number, then the appropriate ASCII character needs to be entered in the place of the number, eg. O is CTRL U SHIFT 2 not the keystroke "O", similarly, a value of 65 can simply be replaced with a capital "A" or if the table calls for an "A" then "A" will usually work. Control codes and escape sequences don't occupy space in your printout, but they do at your monitor, so alignment of columns in tabular form may take a little bit of effort but can be quickly mastered if the word-wrap mode is off (hollow cursor).. Another hint, to cut down on keystrokes, use an unusual character(s) throughout your text where you plan special print to occur and then use the RS function to replace the character(s) with the needed control codes.

The following table is supplied to help Gemini owners to do many of the functions of which the Gemini is capable. There are many more codes available on the 10X and I'm sure other brands can be manipulated in much the same fashion. Please feel free to send codes that jiggle your printers raw so that we can pass on this information to our readers.

Mid-south 99 users group, Mac Swope

TI FEST-WEST

The 99 Fest-West opened its doors to an eager crowd of 99'ers on Saturday, March 1, at the Shrine Exposition Hall in Los Angeles. The show was held on the upper floor in conjunction with a larger Computer Bellathon and Expo on the main floor.

The first major event was a presentation by Craig Miller, president of Miller's Graphics, who introduced a new piece of hardware, an IBM keyboard interface card. According to Miller, the card will go into the PEB and allow purchasers to use any IBM-compatible keyboard. The 4A will still need to be connected, but it can be put aside in a spot where you can get to the module port.

By using an IBM keyboard, users will have dedicated cursor keys, a 10-key numeric pad and programmable function keys! The interface card will have a 32K buffer that will allow for macros and batch files. Due to the current flux in the chip market, no definite price was given, but Miller said he will try to keep it as low as possible since users will still need to buy a keyboard. (IBM keyboards sell for around \$55-90) The keyboard buffer will be battery-backed and users will be able to save the keyboard configuration to disk. Miller anticipates he should be in production in 10-12 weeks.

Comuserve and The Source also attended with live hookups to the network connected to others across the country with TI news such as Ron Albright... Several FREEWARE authors were present as

well demonstrating their FREEWARE. (I was offered to attend but unfortunately could not make it so I sent a video tape.) Many vendors of both hardware and software attended such as Taxasents, DaaBioTics, Asgard Software and Bits and Chips... Among the more noteworthy products was TI-Artist in which a number of PC owners almost purchased it before they found it was for TI only, quite a testimony to the program.

Among many others who attended was Lou Phillips of Myarc Inc who presented the big event for the day. For openers, he demonstrated the new Extended BASIC II. A demonstration and explanation of its many features brought an enthusiastic response from the audience. XB II has many Unix-like commands and operates much faster than TI Extended BASIC. Phillips pointed out that the XB II requires the Myarc 128K card. Perhaps the most impressive demonstration of th XB II's power was when Phillips listed a program to the screen (at about three times normal speed) and then opened up a window and listed the program to just the upper left quarter of the screen (at blinding speed).

Following the discussion of XB II Phillips displayed the keyboard for the new computer his company is designing, along with a power supply board and a wire-wrapped motherboard. The computer was not operating, but he promised a working model would be demonstrated on March 15 at the New Jersey Texas Instruments Computer Owners Fun Festival (TICOFF).

A detailed discussion followed Phillips demonstration of XB II. He concentrated on the architecture and technical aspects of the new computer. Phillips noted that the chips his company is using use intelligent instructions while many of the routines used by comparable machines are done through software. He hopes to be able to take orders by June.

Edited from MICROpendium by Gary Cox

NEWS

The TI Fair in Nashville is scheduled for May 3rd from 9:30 a.m. to 5:30 p.m. and 12:30-5:30 p.m. May 4 at the Cumberland Museum in Nashville Tennessee. Bob Teague, president of the Music City 99ers User Group, said the focus will be on southeastern regional users groups, and that guest speakers are scheduled. For further information contact Music City 99ers at:

Music City 99ers User Group
P.O. Box 24866
Nashville, TN 37202

Bob can be reached by phone at home (after 6pm) at (615) 366-4220 or outside of Tennessee at work Mon-Fri during regular business hours at 1-800-251-1852. This fair will not be on the scale of the one that was held in Chicago but it will give us TI users in this part of the country a chance to get together and have a fun time meeting each other etc... Hopefully some third party vendors will be there to talk with as well. We discussed at the last meeting about our group setting up a table at the fair and arranging transportation up there ect... Mac Swope will be in charge of these arrangements so you should contact him if interested.

Some discussion in the group has also been going on about setting up a full scale TI Fair to be held here in Memphis. This is still in the discussion stage for a time in the future but we would like input on the idea from people in our group and those that receive our newsletter. Memphis is in a central location in the south and we could try to arrange a large meeting place such as Memphis State so we will have plenty of room. Please write to us and tell us what you think. (Please direct your comments to Gary Cox.)

TI SWAP-N-SHOP

A TI99/4A Swap-N-Shop is scheduled to be held from 2 to 4pm April 13 at the Author Mag Center behind MRI, Rockhill Road and Volker Boulevard, Kansas City, Missouri, phone (913) 371-1092. There is a \$1-2 registration fee for the event, sponsored by the TI99/4A KC Users Group, P.O. Box 12591, North Kansas City, MO 64116.

HAPPY ANNIVERSARY! March marks the first year in operation of our TIBBS bulletin board. TIBBS was started about a year ago as a very basic system with only 32K and TIBBS has now grown to one of the largest boards in town and one of the largest TIBBS's in the country with over 300 users many of which are regular long distance callers. We have even had callers from as far away as Canada. TIBBS provides a means whereby people can carry on conversations with each other (VIA computer) much like CB's. A lot of information is also available on TIBBS on new products and special deals etc... Some of the information in the newsletter first appears on TIBBS. 25-30 programs are also available for transfer from our system to yours if you call using a disk system which provides you with a means of obtaining programs between systems. I know a lot of people in the club have modems but some of you do not call, try calling sometime (use TE2 or FAST-TERM) I think you will be surprised! All that is needed to call is the TE2 cartridge, an RB232 (standalone or in the PEB) and a modem (300 or 1200 baud). The number is 901-357-5425 24 hours a day 7 days a week and you do not have to use a TI to call. (The system will explain to you how to use it when you call.)

According to a reliable source Unisource Electronics is going to discontinue it's TI Product line. After 2 days of trying to call them on their 800 number (busy) I have not gotten though to confirm this. The competition with the other large companys such as Tenex, Triton and Tex-Comp... was probably too much for them. No further details are available.

Ryte Data announces a GPL Assembler for the TI. This program provides the power to write, edit and assemble true GPL programs for the TI 99/4A. Create code that accesses console operating system routines directly. Develop programs that use the GPL interpreter and all the features of the TI99/4A. One of TI's major secrets was the GPL interpreter contained on GROM chips in the 99/4A console. This internal code, "Monitor" and the operating system, was never documented. Many of TI's routines, programs, languages and command modules are written in this "Graphics Programming Language". It is now possible to write your own "modules" or update GPL modules (with the new hardware devices

such as Maxima and Gram Kracker which are now available), modify disk based programs written in GPL and create working GPL programs such as Myarc's new Disk Manager III program. You can even modify the TI99/4A operating system! New hardware devices will be available to take full advantage of this important software package.

New TI products from Germany are also expected to be available soon, according to Bruce Ryan of Ryte Data.

Ryan says he learned of the products by talking to Manfred Wilhels of Mechatronic GmbH at the TI Fest West in Los Angeles March 1-2.

Ryan says Wilhels told him he would have a model of a 128K card for the PEB "ready to go in 30 days.". An 80-column card will be available around June 1, he says.

With the 80-column card, 256 colors will be available and it will be compatible with all TI software, Ryan says. The card would have a resolution of 256x208 pixels and allow multi-colored sprites in all 256 colors, with 192K video RAM. This is a version of the 99/38 chip without the MFX option and will put out RGB or composite monitor signals, according to Ryan, who says samples should be available in mid-May. Users will be able to access 80 columns directly using assembly code, Ryan says.

For information about the above and the GPL write to:

Ryte Data
210 Mountain St.
Haliburton, Ontario, Canada K0M 1S0.

The 99 Home Sentry, usable for home security or just for convenience, has been developed by CorComp in coordination with X-10 USA Inc. With this system the user can turn lights on or off or can dim or brighten them with as well as turning other appliances such as a stereo on and off. "You can use it as security, to make it appear that someone is home, or just for comfort, to turn on the heat and the coffee in the morning," Jackirae Saguspe of Corcomp said. The system is called Powerhouse and once programmed by the computer you may then turn off the computer or use your computer for other uses thus it does not tie up your system and you do not have to leave your system turned on. The package containing the software, cable and interface would retail for "around \$100". The small modules for the appliances sell separately, she said, because of users' differing requirements. For further information, contact CorComp Inc. at:

CorComp Inc.
2211-G Winston Rd
Anaheim, CA 92806
(714) 956-4450
(or look in the latest Tenex catalog.)

Triton (1-800-227-6900) is now offering 4A FLYER. It is the only 100% Assembly Language flight simulator for the TI99/4A. Your mission is to deliver cargo to several airports in your beacon's range. Real-time displays help you react to adversities such as changing weather conditions. Guide your plane over realistic scenery, to and from the airports. Select the combat mode and line'em up in your sights. The program will run with just the console as it is in a cartridge. A forward view out of

the plane is shown on the screen for a realistic flight. Price \$19.95 programmed by John Phillips. Triton also offers a module adapter for people who have consoles that say "Texas Instruments V2.2" when you turn the system on. The V2.2 consoles were modified by TI so they will not operate some third party cartridges without this adapter. Price \$29. Made by Corcomp.

Thomson Software is scheduled to discontinue retail operations April 15. Don Thomson of Thomson Software says he is closing down because he will begin a new job with a large data processing firm, and has been asked to stop business because of conflict-of-interest considerations. He will be offering several of his programs to user groups to distribute and I have written to him to obtain these programs.

For cassette owners a VERY good source of programs for cassette tape is Tigercub Software. For a catalog send \$1 to:

Tigercub Software
156 Collingwood
Whitehall, OH 43213

SST Software is now offering a BASIC compiler for the TI. A compiler will transfer your BASIC program into Assembly Language for much faster execution speed..! For information write to:

SST Software Inc.
Box 26
Cedarburg, WI 53012
(414) 771-8415

Support your local TI Users Group! Users groups have become the main source of support and assistance for TI owners. The users groups are the main source for information and assistance that otherwise would probably not be available. User groups provide a source of free programs, discounts, demonstrations of new products, assistance with equipment problems, technical information and just a fun get-together of people with a common interest.... Let's stick together and we will be around a long time to come! TI 4 EVER!!!

Gary Cox (with portions edited from the March 86 MICROpendium)

PROGRAM BIT

This month's meeting will be a very special one with some very unique never before demonstrated materials. The first item that will be demonstrated by me will be the Plato educational software. The Plato Software is designed by Control Data and is probably the best educational software for any computer and the next best thing to actually taking a class in a subject. According to my information over 300 Plato series are available ranging in grade levels from first grade to college level and in subjects such as Science, Physics, Mathematics, Foreign language etc... All Plato software series are still available.

The second demonstration will be of a new public domain program just received. This one the kids will like as it is a program that runs in XB with the speech synthesizer where Ernie

and Bert from Sesame Street carry on a conversation where Bert gets angry at Ernie. However, what will of interest everyone is that the picture really looks like Ernie and Bert and their speech sounds just like them! Then to top it off it is all done in Extended BASIC using words not in the XB vocabulary!

The third demonstration will be by Mac Swope of a robot plotting system called Penman. The system consists of a robot connected by a cable to the TI where it receives it's commands. Plotter Software is included where you can draw line graphs, bar or pie charts etc... on the screen and the robot will then reproduce the picture on any size paper using any of 3 different color pens which the robot can change as it is drawing producing multi-colored pictures! Penman is similar to those very expensive computer aided engineering design plotters that engineers use to produce blue prints etc... Which with this device you can create anything you wish including blue prints! The robot has a motor which carries it across the paper so it can draw the pictures. Sensors on the robot are used to guide it...

If you have not attended the last few meetings you will not want to miss this one! Then as usual the BASIC programming class will be meeting, the disk library will be open as well as Adolph Butler with the cassette library. Programs are continuously being added to the disk and cassette library and are available FREE of charge to members of the group. We have programs available for everyone, even those who just have a cassette recorder and the console. Furthermore, many of the programs that we have are not cheap programs but FREEMARE and Public Domain programs of high quality. Books, magazines and schematics on the TI are also available from Adolph Butler and our group mail is available for reading at the meetings as well. We receive quite a few newsletters from other groups across the country as well as a bunch of other mail... See you there...

Gary Cox

SHOPPERS CORNER

South Jersey Computers, P.O. Box 5, National Park, N.J. 08063 has the MBX Expansion System (voice recognition system) and the baseball cartridge for \$40.95 + \$3 shipping. If interested call (609) 848-5963 or write.

Arvies Office Supply on Union Ave has boxes of 2500 sheets of microperf paper at a good price.

Games "N" Gadgets in the Mall of Memphis still has some cartridges available.

Dillard's at Poplar Plaza has 2 TI Disk Controllers (\$99) and 1 TI Disk Drive (\$79) for sale. If interested see Don Clarke in the electronics department. (Note a PE Box is still needed for the controller and disk drive.)

Also check the for sale table at the meetings as it is always full of items dirt cheap which are usually not mentioned in the newsletter. This is one reason to attend the meetings.

If you have something you are looking to buy or sell drop us a note and we will try to put it in here FREE of charge to members...

Larry Hamel has a Foundation 128 card with DSR and Ramdisk installed for \$99 call him at 872-4742

Radio Shack has TI Modulators for sale for approx. \$5 you might get a backup while they are available
Gary Cox

TICOFF

The following is a brief report of the TICOFF sent to us from Christopher Morgano in Mineola, New York.

T.I.C.O.F.F. short for Texas Instruments Computer Owners Fun Festival was held Saturday March 15, 1985 at Roselle Park High School. This fair was of special interest to me because of the different vendors and lectures. Some of the attending vendors were: Textaments, Quality 99 Software, Myarc, also were assorted local user groups with demonstrations. The lectures were great. Chris Faherty of Inscobot had a lecture on Myarc XB II - Bitmap Graphics. He talked about interfacing TI-Artist pictures using XB-II and the 128K card. Allows programs to be created with TI-Artist and loaded directly in XB. Explained were some graphics functions of XB-II and functions of TI-Artist.

There were other lectures which I did not attend. Some of them were: TI-99/4A DIRECT ACCESS TO HARDWARE DEVICES, Paul Charlton, ADVANCED PROGRAMMING TECHNIQUES AND EXPERIENCE WITH THE NEW MYARC BASIC, Al Walkowiak, COMPUTER SIMULATION AND MODELING, Jay Holovacas, FORTH, Dr. David Jagerson, and of course Lou Phillips of MYARC demonstrating XB-II and his new computer. The MYARC demo was the best. I was amazed by the speed of XB-II. It performs all of the same features as TI XB, execution up to three times faster, 40 character display text mode, windowing, and the best part Hi-Resolution graphics. You now can make superb graphics with the following commands: CALL MARGIN, CALL POINT, CALL POINTSTAT, CALL DRAWTO, CALL WRITE, CALL GRAPHICS, and many more. Also when you want to load a program from TI XB you would type RUN "DSK1.LOAD". Now you could type RUN DSK1.LOAD or RUN LOAD.

Unfortunately I was not able to see the new MYARC computer because we had to leave NJ early in order to beat the traffic in NY. But I did see the shell of th computer. All I can say is that it was gray and looked like a PC. I really wish I could have seen this marvelous piece of work demonstrated.

I hope there will be more fairs like the TICOFF and hope it is held next year.

Christopher Morgano ##
TITEX Users Group Long Island, New York

PILGRIMS PRIDE

Pilgrim's Pride of Hatboro, Pennsylvania, was anticipating the release of a new product, unnamed as of press time, for the TI99/4A.

The product, a module and disk package tentatively priced between \$60 and \$70, is said to allow the user to load almost any

cartridge made for the TI99/4A onto a disk and run it through the module (allowing the user to run all the cartridges through the one module).

According to the manufacturer, the product expands the user's system by 8K and provides an Editor/Assembler loader package (load and run, run program files and print program files).

With the 128K or 512K RAM card, the product is said to allow assembly programs to use all memory as directly programmable, giving the user a true 126 or 520K computer. It is said to allow the user with a single keystroke to run any program file from any drive and page through all files on all disks. Users may load up to seven programs in memory at one time and execute any of them with a single keystroke, according to the manufacturer. Upon completion (or resetting the Widget reset button) of that program the user will be returned to the main menu and will be immediately ready to run any other resident program.

According to Pilgrim's Pride, also coming soon is a 136/520K Assembler/Loader package, with the assembler/loader transparent to pages in memory, which includes the following macro instruction routines: Move blocks of data to and from RAM, ROM, VDP RAM, etc.; store several screens; page screens at will; and scroll screens in all four directions (up, down, left, right).

Pilgrim's Pride is located at 5 Williams Lane, Hatboro, PA 19040. Phone is (215) 441-4262 or the new toll free order line, 1-800-TI-STUFF.

From MICROpendium March 1986 issue

XB TI-WRITER DISCOVERY

While experimenting with the Extended BASIC TI-Writer loader (in our library) that came from Austria I discovered that the utility option has a feature which will allow the loading of some Assembly Language programs that previously required the Editor/Assembler cartridge! Here are the steps in loading an assembly language program with the TI-Writer loader:

1. Select number 3 on the menu (Utility).
2. Type in the device and file name for the assembly program.
3. Select graphics load (number 2 on menu).

The program should now load and automatically run. However, there is one catch, this loader will only load certain assembly language programs. The only way to find out if it will load a particular assembly language program is to just try it. If an error occurs then the loader will not load it. One program I found that the utility loader would load was the new disk manager program we have in our library (not DM 1000 it loads from XB anyway.). This utility option on the XB TI-Writer loader is handy if you do not have the Editor/Assembler cartridge and you wish to run an assembly language program that will not load in Extended BASIC.
