PRESIDENT'S CORNER
 Bill Tiep

WELL THE FALL IS UPON US AND I HOPE EACH HAD A WONDER FULL SUMMER VACATION.

THIS SEPTEMBERS MEETING WILL REQUIRE YOUR ATTENTANCE IF NOT FOR ANYTHING ELSE BUT THAT YOU MAY BE COUNTED AS A CONCERNED MEMBER.

THIS MONTH WILL BE THE USUAL CLUB DISKS, 50/50 DRAWING, AND THE DEMOS; IF ANY. MICROPENDIUM WILL ALSO BE ON SALE AT THE DISK SALES TABLE. I ALMOST FORGOT THE MEETING WILL BE AT UNITY CHURCH; IN TOLEDO; OHIO OFF SECOR ROAD; BEHIND WENDY'S ON EXECUTIVE PARKWAY. AT 12:30 P.M. SHARP. HOPE TO SEE YOU ALL THERE; AND DON'T FORGET BRING A FRIEND. "WE NEED TO INCRASS OUR MEMBERSHIP" !!!! THE REASON I'M INCLUDING THIS IS THAT IT WILL BE THE THIRD SATURDAY INSTEAD OF THE SECOND AS USUAL. "SEPTEMBER 15, 1998." WILL BE THE DATE OF OUR MEETING.

SO LET'S SPIN OUR WHELLES NO MATTER THE TYPE TO YOUR NEXT MEETING AND SHARE WHAT YOU KNOW WITH SOME FRIENDS; YOU WILL NEVER BE SORRY. YOU MAY EVEN FIND YOU HAVE HELPED SOME"

ONE WITH A PROBLEM YOU HAVE ALREADY HAD. SO IF YOU NEED SOME HELP IN WHAT EVER DOESN'T COMPUTE. BRING IT TO THE MEETING AND GET IT SOLVED. WE'LL JUST OOZE OVER THE PROBLEM WITH THE KNOWLEDGE OF THE "GROUP"

N. H.

EDITORS NOTES

THIS PAGE I REALY GOT CARRIED AWAY; BUT HOPE IT TURNS OUT OK. THIS WHOLE NEWS LETTER HAS BEEN DONE FONT WRITER; AND PAGE PRO 99 - MOSTLY THE LATTER.

SUPPRORTING SOFTWARE USED WAS MACFLIX; P.C. TRANSFERE; PIX PRO; PIX; MACPIX; RLE2; TI-ARTIST V2.01 WITH MOUSE SUPPORT FOR THE GENEVE.

I REALY INJUDY USING PAGE PRO 99; BUT IT IS MORE FOR GIVING WHEN DONE ON A GENEVE THEN A 99/4A SIMPLY BECAUSE OF THE SPEED PLUS THE ADDED FEATURE OF THE BUILT IN RAM DISK. I FIND IT BEST TO SAVE MY TEST FILES TO THE RAM DISK WITH ALL THE SUPPORT FILES WITH CONTROL F . WITH THE SAVE PAGE ROUTINE. THIS WAY I CAN GET IT THE WAY I WANT THEN I SAVE IT AS A PICTURE FILE. FOR A PERMONT RECORD. AND THATS ALL THERE IS TO IT. RCF

```

100 CALL INIT :: CALL LOAD(-
31804,255,0)
140 DISPLAY AT(12,2):"WHICH

170 FOR I=12288 TO 12288+LEN
(AS)-1 :: CALL LOAD(I,ASC(SE
GS(AS,I-12287,1))):NEXT I
:: CALL LOAD(12318,0,LEN(AS))

```

The above program is a file which I use to load Ti-Artist v.2.01 from any drive from 1 thru drive #9. What is unique is that it also has Dis/Fix 80 file merged in with it. This enables me to load it from Extended Basic, with the only only request from the program is what drive I wish to do the boot tracking.

As it is right know the item that has to be typed in the number from 1 to 9 and enter. If someone can supply me with a address in CPU memory that I could peek to without having to load a peekv routine in with this program then the tracking will be automatic. Then if an error was found it would then jump to line 140 and ask for a certain drive. This would allow the program to be stored on a different drive or what ever.

I hope everyone had a very nice and long summer vacation. With many wonderful experiences to talk of. I know I have, right now I am looking at about 75 disks I haven't even had a chance to look at. Everything from to two unreleased game games of ET's adventures, to an XB link Dis/Fix 80 utility that will allow windowing up to 8 windows anywhere on the screen. Each window can be as big as the whole screen and can be caused to scroll in less then a second from one to the next. Other items of interest I have in my possession 5 disks that let me look and move data in memory and another ten disks with about 250 machine language routines that will allow for links to XB. So as you can see I have a great deal to look at. And these don't include Berry Trainers XKB routines, or my EZkeys routines. Also been playing with the Draw and Plot data from Super Extended Basic cart and found that it is possible to capture the 8K to disk and link load it back as needed in an XB program but, to tell the truth haven't found too much use for it. And fill this one is best left alone for legal reasons.

The reason for the above with Draw and plot is that I like to load in my Geneve both XB and E/A and found in some cases the 8938 loses something switches the color palets to some real red colors, so for some programs I run this mix of regular XB/EA from my Gram Kacker disk.

PLEASE
TURN THE
PAGE !

Lately I have been using Page Pro more and more but one of the best functions of the program is its ability to import blocks of text anywhere on the page. The only problem is that it will only load files the standard Dis/Vor 80 files. To many this won't be too big of a deal. As for me it is. Let me tell you of a case. Super Extended Basic's list command allows the LIST command to have a size dis/vor. from any thing from 10 to 255. The command would look like this:

```
LIST"DSKn.filename":28:[begin-
  ing line # ending line
  #] the line numbers are
  optinal.
```

But, when you do a directory you will find the file is in Dis/Vor what ever number you type as in the case of above Dis/Vor 28, which will allow saving an XB program as it looks in edit mode. The following program helps solve this problem.

```
50 CALL CLEAR
100 PRINT "ENTER 'device.fil
enome'"
110 INPUT "_____":FILES
120 OPEN #1:FILES,INPUT ,DIS
PLAY ,VARIABLE 28
130 INPUT "PRINTER (Y/N)? ":
CS
140 IF CS="N" THEN 220
150 PRINT "ENTER 'printer no
me'"
160 INPUT "_____":PS
170 OPEN #2:PS,OUTPUT,DISPLA
Y
180 LINPUT #1:AS
190 IF EOF(1)THEN 260
200 PRINT #2:AS
210 GOTO 160
220 LINPUT #1:AS
230 IF EOF(1)THEN 260
240 PRINT AS
250 GOTO 220
```

This is a very simple program to convert D/V 28 files to D/V 80 format that can be load from disk to Page Pro's text import function. But, serves well for this purpose. considering it only took me 10 minutes to write this routine it serves well for the purpose at hand.

For the past 3 years I have been your news letter editor and have planned to step down at the end of the year of 1990. But, because of circumstances beyond my control it may be sooner then I would like. In this case if General Motors has a inter-national strike which comes due Sept 14 1990 I will not be able to serve as your Editor, But let me say this all hinges on wether or not they go on strike. Who ever takes over I will give as much help in what ever is needed to continue this this news letter because I fill without this our club will not lost without it. I will continue to write articles for the news letter. And belive me I can write.

Did you know that a Page Pro picture the size of a whole page is 210 sectors, which means that an eight page news letter requires 1680 sectors on a disk, which means if you use 360 format you would need 5 disks to hold it all. To bad someone couldn't come up with a compression routine of 4 to 1.

I am trying to use Page as much as possible in this this issue and it seems to work great. this is the program I wised about 3 long years ago and it is finally here!!!

PAGE PRO 99 HIGH RESOLUTION PICTURE PRINT UTILITY v2.0
 Copyright 1988 - Ed Johnson
 This rather simple utility was written to fill a need that many Page Pro 99 users have: to get higher resolution output than is currently available with Page Pro 99. I think you'll find this utility very useful in it's current form. It will read any size Page Pro 99 format picture file and print it out in 4 different combinations of density and width. The program is simple to use, is reasonably fast, and gives excellent results. In addition, you can selectively overstrike the output. If you choose not to overstrike, the output is that same as from Page Pro. With overstrike, the paper is feed 1/216" (or 1/180" for 24 pin printers) and the same line is printed again. With overstrike output, printing takes twice as long, but the quality is much improved. The program will handle any size Page Pro picture, up to and including a full page. You can clip a page as a picture and then use this utility to print it out in higher resolution than is currently available with Page Pro itself. I have provided no options to squeeze the picture vertically (yet!), so I recommend that you leave a blank line at the top and bottom if you want to print a whole page that you've clipped. After the program is run, you are greeted with a title screen that describes the program. Press any key to advance to the next screen. This screen has the fairware notice and will prompt you for several choices for printer output. First, select the printer mode: 8 pin or 24 pin. 24 pin

printers will handle both options. The exciting part of the new 24 pin mode is that it supports full 24 pin output, not just emulating an 8 pin mode! The output is also set up so that a full 66 lines will fit on an 11" page. What I had to do to accomplish this was to convert the normal 8 pin graphics data (one byte) into 3 bytes of graphic data for the 24 pin mode. In doing this conversion, I expanded (or reduced - depends on your point of view) the data to use 20 of the 24 pins and set the line spacing accordingly. No matter your point of view, the output fits on the page and the quality is excellent! The next three selections are for determining density, width, and overstrike. You can get 8 different "resolutions" of output with this version. The 4 combinations of density and size below can each be printed with or without overstrike. Those with 24 pin printers actually have 16 combinations since there is also a vertical size difference between selecting 8 and 24 pin mode. Single Density/Normal Width (Use Single/Normal selections) Single Density/Double Width (Use Single/Wide selections) Double Density/Half Width (Use Double/Narrow selections) Double Density/Normal width (Use Double/Wide selections) To quit the program, enter "0" for printer selection, or a null string when prompted

for the picture file name.

Some more notes on page pro one of the items I wish it had is in the inport text is a way to specify blocks of text by line numbers. Such as 1 35 DSKn.filename this would make inporting text flow more freely. Also it now will only inport DV/80 FILES. Maybe if it should read DV/any size and use the directory size for input length for the file. All and all it is still a great program.

September 1988

New Horizons

since then has been thin, but several important topics have developed anyways. Bruce Hellstrom has written a mouse driver that works with the 9640. He is seeking JP Software to market the program. If JP doesn't go for it, I am here Bruce (grin). Bruce has also updated his Debugger to now include viewing all 128K of the VDP ram on the 9640, including all mapping of the 9640 in MDOS mode. And before I almost forget it, Bruce has also written a program that patches the Geneve operating system to accept 80 track disks with TI and CorComp disk controllers and also changing their step rates. This means that the TI and CorComp and Myarc with the 40 track Epron, can format and use 80 track diskettes, up to 2880 sectors if you have a double density capable controller. This is an extremely nice utility to get the full use out of your drives while Myarc plays the HFDDC support code. One final word, and I will wrap this segment of news up for this issue. Myarc in Chicago released a slightly different version of 1.14F and 0.96H versions of the operating system after Paul Charlton released his version in September. Be AWARE, while Lou's version 'fixes' the RAMDISK problem, it creates others. Most noticeably, SETDSK (80 track patch program by Bruce Hellstrom) will not work with it unless SETDSK has a sector change, and I have

found that The Printer's Apprentice, The Geometer's Apprentice, and virtually any program that prints from the MDOS side of the 9640, had complications printing. Reverting to Poul's release fixes the problem. This was noticed in both versions of Lou's 'fixes'. I would advise anyone receiving a version of MDOS either directly or indirectly to not blame a program for malfunctioning if they have printer problems. I have even seen one individual with the exact same program, that actually cured an RS232 problems. So, be aware, and don't be scared if something acts funny.

Sorry about this page but still learning the program and have a lot to learn. this page is an excerpt from 9640 NEWS. For those with a Geneve it is worth while.
