# Tony & Will McGovern in Conference

## Attendees:

JHWHITE	Jeff W
COQUEST	TONV&WILL
BRADSNYDER	Brad.
JERRVC	
C_BOBBITT	ChrisBobbitt
BDOORNBOS	
CAL47	
TTC	ChrisT
FROBOTZ	H_Brashear
EICHER	Dano
TIRUGED	
TELEDATA	JEFFG
MICBRO	
MORYNDERMAN	
EGERKEN	Ed
BBOONE	
9648NEWS	Beery
WALTHOWE	WaltH

Delphi II NE  
INTERNATIONAL CONFERENCE  
via Internet  
Sunday January 10, 1993 - USA  
Monday January 11 - Australia

<Jeff W> We have enough to start, I guess. :)

<dano> ?

<Jeff W> go, Dan

<dano> Do you want the whole list or just the top ten?

<Jeff W> One at a time.

<TONV&WILL> start wherever you like

<dano> Will you be adding support for geneve time and date stamping and subdirectories with the next release of disk review?

<TONV&WILL> No Geneves here at all so we can't test so it will not be supported -- may add path name access

1000 No need for a geneve. A fs with the appropriate software could handle subdirectories.

<TONV&WILL> OS pretty well fills the machine already, the 9000 editor just released has 50 with path name support. As of yet we also do not have a HFCC or a hard drive -- next question

<dano> Why is it that Track Hack is not distributed with Funnelweb?

<TONV&WILL> 1) because it is for a particular disk controller and 2) also because the Funnelweb release is big enough already... I thought disk protection on the TI was out of style now anyway... next

[NOTE: Track copiers are sometimes used to backup protected disks - ED.]

<H-Brashear> Is it true that you are working on the software for Bud Mills right now? The hard drive controller that is.

<Jeff W> Cbw, it might help the rest of know who you are directing your questions to by specifying Tony or Will)

<TONV&WILL> I refuse to confirm or deny that... only joking... yes, I have a SCSI card hot off the presses and will be working on the low level aspects of driver. I have lots of SCSI experience and access to lots of SCSI devices.

<H-Brashear> SUPER!!!

<TONV&WILL> next

<Jeff W> ok Right, Harry.  
o! I might add that Will has worked with the same SCSI chip used on the WHT SCSI in the past.

JERRVC> SCSI question

<Jeff W> Dan, you had another question?

<TONV&WILL> are we out of questions already ?

<Jeff W> go, Jerry  
o! Some of our guests sleep the first hour or so.

JERRVC> Do you have any experience with SCSI interfaces for parallel ports?

<JEFFG> Evening!

<TONV&WILL> The company I first worked for has one of these beasts for the Amiga. I managed to avoid it because it was a nightmare with no timing (everything was bit)... That was my first hard

drive controller. Any particular reason?

ChrisT> Okay, I'll be looking for it. Thanks.?

TONV&WILL> next

Jeff W> ga. Dan

dano> About a year and a half ago I sent a list of bug's that I had found with funnelweb to Tony. The two I remember off the top of my head was 1) Problems with the Assembler and 2) a problem in the edit feature of DR.

JERRYVC> The TRONTOR generic unit is down to \$120 and I think reasons of a portable hard drive [the "particular reason"]. But I don't know if both the TI and IBM parallel port will work.

dano> About a month ago I sent a big box to tony and it had a copy of the letter on disk... Have those bugs been fixed and when/if do you expect a maintenance release of funnelweb to come out?

TONV&WILL> Little DR bugs are being fixed as they are found.. We are not aware of any bugs in the assembler that were not inherent in the original TI assembler

dano> c: Jeff would you like to explain the bugs that you/we found in chicago?

<Jeff W> Jerry, did you have more to add about the PIO port SCSI?  
c: I will.

JERRYVC> Unless T or W has a comment on the parallel ports - no.

TONV&WILL> Next release will be a gradual affair... A new 80 column editor is now out and Tony is working on a 40 column version. No current plans to change the assembler... Just too much work Tony is thinking about the formatter... :-)

Jeff W> Could a PIO port SCSI be done?

TONV&WILL> Theoretically it can be done for the TI....

JERRYVC> Jeff - you can buy a parallel port SCSI controller now - but will the PIO port do?

TONV&WILL> No the TI has a fairly standard parallel port... similar design to those on the market already would be feasible... Problem would be a DSR... You cant afford the memory space to keep a DSR in memory anyway.. unless you use some of the new memory boards. - next

ChrisB> (plural?)

ChrisB> I'm sure, and the Memex make too

ChrisB> I need to send you guys a packet too

ChrisB> Chris, down boy!!

Jeff W> Tony and Will, only RAMBO and the Regard AMS are available at this time. The 4A Memex is coming soon.

TONV&WILL> we do have a genuine TI 128K card but it is not really veruseful because is it one of only a few in the world

ChrisB> The AMS is not a TI 128K card -- nor is the AEMS

<TONV&WILL> I know that.... we have the original TI tho...

<dano> I thought the AMS WAS what TI was planning for 99/4a memory expansion? Wouldn't that make it a TI 128K card Chris?

JERRYVC> [got one here too]

<ChrisB> No, the AMS is modelled on the memory system built for the 99/8 I don't think TI ever planned to use its mapper on the 4A Besides, it goes up to 512K with a chip change

<Jeff W> Let's not get too unruly here. We don't want an editing nightmare.

<ChrisB> Sorry, Jeff.

<Jeff W> We can discuss the AMS/AEMS if Tony and Will want to do so. But first, let me clear up the assembler question Dan had.

<TONV&WILL> tell us briefly what they can do... We have seen micropendium ads (Oct)

<Jeff W> First, much of the assembly problems I had with FW were Geneva-related. However, there is one thing I consider a bug (or unexplained feature). A label cannot be used as a workspace register.

CRUBAS EGU 12  
LI CRUBENS,>1130

That won't work with the FW assembler.

<TONV&WILL> This worked the last time we checked... I'll get Tony to write a quick proggy in the other room while I talk...

<Jeff W> The same test program I had worked with EA assembler, and that appeared to be the problem with FW 4.90 (I think).

<TONV&WILL> BTW, does anyone know where I can get the the

9900/9995 assembler for the Amiga written by Al Beard and Clint pulley... It will make development easier?

Jeff W> Will, send Al Beard (A9BEARD) mail on Delphi.

dano> c: If I remember correctly, it would compile, just not correctly.

MERRYD> c: yours is not the first request - we should ask Al to post [the Amiga 9900/9995 cross-assembler] here.

Jeff W> Recall that I was fighting Geneve DSR bugs as well.

TONY&WILL> Tony has returned... he said the register equating works fine Don't know about the Geneve though.. As policy Tony tries to eliminate all Geneve-hostile code, no matter how much it hurts

<Jeff W> I would not think the Geneve would have any affect on label equating registers.

<TONY&WILL> neither would I

Jeff W> Here is a BAD Geneve bug with assembler (any). Never have more than 3 files open at once. ChrisB, want to describe the AMS/AEMS to Tony and Will?

ChrisB> Sure - if no one has any other questions

TONY&WILL> What is the probm with this 3 files ? The assembler can have at least 4 files open at once

Jeff W> (btw, there is a text file on Delphi describing it) The Geneve only allows 3 file buffers to be open in GPL mode.

<TONY&WILL> That is a problem with MOOS... not Funnelcut

<Jeff W> Right.

TONY&WILL> Warning... the formatter sets call filesCMD also

Jeff W> Let's close the topic for now. I have more information on the problem -- just got it.

TONY&WILL> ok... next

<Jeff W> Do you want ChrisB's AMS exposition, Will and Tony?

<TONY&WILL> We have read the micropendium article.... Email might be a better alternative

<Jeff W> Okay.

ChrisB> I won't bore the assembled Jeff... I'll just mail you guys a packet.

TONY&WILL> ok...

Jeff W> Anyone have any ?'s

Christ> yes

<Jeff W> go, Christ

<Christ> Guys, I'd like to write a DM for the TI fashioned after Windows for the PC. Can you help?

<Jeff W> c: this might be a good time to post your Internet address if you want the world to know.

<ChrisB> yes - please

<TONY&WILL> Will, I don't really have time for anything but the SCSI project at the moment because I start full time employment in Feb... Tony: The TI barely has the horsepower to support this ... Not to mention "Why would you want to emulate windows 1?1?1?"

<Christ> Why not?

<TONY&WILL> DR owes a lot to XTREE... DR is about as far as you have to go on a TI

<Christ> I prefer a full graphical user interface

<TONY&WILL> I heard mention of a new super DM being written somewhere... was that you?

<Jeff W> c: Probably Mike Maksimik.

<Christ> Could be? But I doubt it.

TONY&WILL> Even our 486 is a dog with windows

ChrisB> :>

<TONY&WILL> I'm afraid all we can offer is best wishes and any advice we can give

<Christ> So is my pc [a 486]. That's exactly why a ti would look very nice

<Jeff W> c: I think Windows is the dog.

<ChrisB> Amiga fans aren't going to be Windows fans :>

<H-Brashear> Amen!

<TONY&WILL> I must admit to a slightly anti-IBM attitude (JS\2 looks OK though)

<Christ> Look guys I don't know where you intend to take

the TI but I have a direction. Make it usable. A GUI would accomplish that. But more importantly, so would modern, easy-to-use software.

TONY&WILL> For an effective GUI you also need a mouse etc and LOTS of memory to handle the graphics unless you go for text mode windows)

ChrisT> I have a mouse. I use gr2 on the std ti and gr6 on the 9958/38.

TONY&WILL> Problem is, not everybody else does and many will not justify a mouse with a single program.

ChrisT> I disagree. Good software would do it. It's cheap esp since mice are cheap.

ChrisB> ut I know what you mean, guys. I have sold about 750 TI mice tho.

TONY&WILL> We believe that the Horizon ramdisk and Funnleweb are about as user friendly and powerful as you can use on the TI and still have room for useful software.

H-Brashear> All things will come to pass

TONY&WILL> With an AVPC etc, the idea would be much more interesting ( and feasible)

ChrisT> Guys you have no vision. I have created the kernel for the gui on a std ti, and it functions quite well. I demand more from the ti because i know it can deliver it.

Jeff W> Funnleweb seems quite a vision, even if I don't normally use it.

TONY&WILL> It has been a while since I pushed the TI to its limits, and I agree that a GUI could be done, but you have to ask what sort of applications are going to be written and what is possible with a GUI eating up chunks of valuable memory ok... next

ChrisB> A full GUI is waiting for more memory, better video and better disks.

ChrisT> [apparently to ChrisB] Ever heard of Rambo, I have been programming it for over three years and it has plenty of memory. I have over a meg of program code ON LINE.

TONY&WILL> GUI is getting a bit off the general range of topics...

ChrisT> Guys I'm lost. All I want to know is where do you intend to take the ti? It would be nice if the orphan could "grow up".

TONY&WILL> We have made that pretty clear with

Funnleweb... FWB is what we envision for the future of the TI... ok... next

ChrisB> That is not a vision as much as a service to the community

TONY&WILL> What new can we expect from the latest release of Funnleweb?

TONY&WILL> Ok... here comes the list :

- 1) New 80 column editor
- 2) Supports TI european languages and special characters
- 3) Mode for IBM full 8-bit character graphics
- 4) Pathname access in SD for hard drive users
- 5) Basically, it is almost a complete rewrite
- 6) 40 column with 8-bit character support also
- 7) Tony may look at updating the formatter
- 8) fixes for known bugs and minor enhancement ( such as GROM handling ) We have a German GROM module ( SuperModule II ) for this

H-Brashear> Would it be to early to wonder what you might be thinking about for the formatter?

TONY&WILL> Tony is trying to overcome the inertia for a full rewrite We don't really know what will be changed or added yet

H-Brashear> What bothers you about the formatter right now?

TONY&WILL> We will add things as we come to them

Jeff W> c: Note that Rsgard has a competing product called First Draft/Final Copy.

TONY&WILL> [to Harry] The formatter is just plain messy and not tightly coded and needs a rewrite.

TONY&WILL> [to Jeff] Thats fine [the Rsgard program] ... I have tried to make FWB load any other program that comes along.

Jeff W> Does anyone have specific questions about FWB? Should I turn to Will's "vision thing" for SCSI?

Jeff W> Will, some of us recall that you thought SCSI would not become available for the TI 99/4A. How has your view changed?

TONY&WILL> Fairly drastically since I received the SCSI card :-) My attitude change has come about in the following way...

thinking....

I didn't believe the TI had a good interrupt structure for a SCSI host controller. The incorporation of hardware handshaking etc has made this a much more simple proposition. I

also had doubts about the transfer speed attainable on a stock TI system. The speed is still not great (~100KB/sec theoretically) but adequate for TI use. I started thinking about portability of devices and SCSI. An investment in a SCSI hard drive is not lost if you decide to move on to another machine such as Amiga :-). Also the range of available SCSI devices is very large and diverse. In short, I was very sceptical, but now I realize SCSI is a viable (although slow) proposition for the TI and Geneve.

Jeff W> of Note, everyone, that the SCSI speed for the TI is because of TI p-box bus limitations not the SCSI card. The Geneve will be have faster transfer rates.

ChrisBobbitt> I realize that it is slow compared to the rated 10Mbit/sec transfer rate... but how will it be compared to other TI storage devices?

TONV&WILL> Only 5MB per second for SCSI-1 (unless you use fast scsu) It should run at the speed of of a horizon ramdisk because, as Jeff said, the limitation is the PBOX interface, not the card. My Fujitsu drive on the amiga is capable of and has achieved ~2.4 MB/sec The TI will NOT run risk of outrunning a hard drive Unless you use the Floptical to read/write IBM disks.

Jeff W> Some might want a comparison to the MVARC HFDC. The SCSI card is slower but faster. Have you read all of Don O'Neil's plans for the SCSI DSR, yet?

TONV&WILL> The speeds should be about the same as it also has the PBOX interface speed limit... I believe the HFDC had on board RAM for DMA (?)

Jeff W> Actually, the way the HFDC is designed, SCSI will likely be faster (if we can help it).

TONV&WILL> The SCSI card should be MUCH more reliable though

Jeff W> The HFDC transfers to local DMA memory, which must then be copied to UDP or CPU RAM buffers by the DSR. Sort of like sharing a transfer buffer among all devices -- whereas most SCSI devices have an independent transfer buffer. SCSI theoretically only has to transfer once from the device.

TONV&WILL> The overall bandwidth is still limited by the PBOX interface

TONV&WILL> The TI will NOT outrun any hard drive... The issue with SCSI is reliability and portability

Jeff W> Just trying to clear up how the SCSI can be as fast without DMA as the HFDC with DMA. I got

into a lengthy discussion about this with a Delphi user.

TONV&WILL> The transfer will be limited by how many bytes you can jam through the PBOX interface. The controllers will never be waiting for bytes to arrive as the devices are so fast. The HFDC will get the data into its LOCAL memory faster but it still has to transfer the information across the PBOX interface to the rest of the machine. Hence the speed is limited by the PBOX bandwidth.

JERRVC> ? SCSI

JERRVC> Are you familiar with "bridge-boards" e.g., NDNPTEC 4000, and will they work with the new SCSI controller?

TONV&WILL> Remind me... are these the plug on boards to convert old MFM hard drives to SCSI ?

JERRVC> right (or RLL)

TONV&WILL> Well, if they support SCSI correctly then there should be no problem BUT I have heard some nasty stories about the compatibility of some of these boards with the ANSI spec.

JERRVC> AMPRO's Little-Board used them so maybe they will work. Thanks

Jeff W> of: It might be a good idea to help us understand how much SCSI is a "plug-and-play" situation as opposed to a "plug-and-pray" one.

TONV&WILL> woah... sorry about that [previous typo] ... big system holdup this end

Jeff W> About 3:30pm Monday?

TONV&WILL> yep... thats the time

Jeff W> Strange how there can be more than 12 hours difference. Oh well.

TONV&WILL> There isnt... we are 8 hours behind and the international date line is in-between us and you

Jeff W> But we are on Sunday. Anyway, it's weird to me.

TONV&WILL> Messes with your head... I'll just accept it I think I could register a complaint somewhere though

Jeff W> Care to comment on my last SCSI comment: "plug-and-play" vs "plug-and-pray"

TONV&WILL> A brief comment :

TONV&WILL> With SCSI all you have to do is plug the drive into the controller... No messing around checking compatibility charts (except in extreme cases). Just plug it on (maybe set a couple of jumpers) and you are ready for action. No formatting required either no worse than setting a CRU base for a card.

Jeff W> c: And the SCSI user manual lists the CRU base switch settings one by one -- no guessing there.

TONV&WILL> One question from us to the masees: When are big HRD's going to support 800K ( DSCD) equivalent drives? 400K drive size limits are getting very restrictive for us.

Jeff W> Too bad Gary Bowser is not here. He is currently working on ROS 8.xx and later. However, I will make a comment. The SCSI card will support larger floppy sizes (like 1.44 Meg). These are SCSI floppy drives, not your standard MFM type that the HFDC is purported to support. The media are the same more or less. Because I am working on the SCSI DSR with Will, and I will likely be doing the 4A Memex DSR when (not if) it becomes available, expect it to support larger RAMdisk sizes.

'ICBRO> Thanks, Jeff, Tony and Will. Goodnight

TONV&WILL> The beauty of SCSI is that the floppies just look like small hard drives... and work the same way.

Jeff W> How that might translate to the Horizon is not an issue right now.

TONV&WILL> Very useful for the new Floptical drives with 21MB floppies

Jeff W> Does anyone here besides Will and me have the WHT SCSI? Or are we boring you with the discussion? Here's a question that I've seen various answers to: Do SCSI-2 drives work with SCSI-1 cards?

TONV&WILL> Yes they will... They are a superset... Although you do have to be a bit careful as they send some ID messages when you select them.. questions ?? general discussion ?

Jeff W> So a person who uses his SCSI-2 drive on his Omega need not worry about plugging it onto the WHT SCSI? Just pretend it is SCSI-1. This means that you can invest in the latest technology so that when or if you decide to jump ship, you are not hopelessly behind on the new system.

TONV&WILL> Well, my Fujitsu is a SCSI -2 drive and the 3000 only has a SCSI-1 controller.... Most SCSI-2 devices come with a jumper for SCSI1/SCSI2. This allows you to disable

strange messages that may confuse the driver.

SCSI-1 drives are cheapest now, but they might be hopelessly slow (a bottleneck) or the systems of tomorrow.

JERRIC> You have had a policy of not encouraging FWB distribution on systems such as DELPRI... (though they get here anyway) - might this change in the future?

TONV&WILL> That is because 1) usually gets distributed mangled or incomplete 2) very little response to us from such downloads

TONV&WILL> At this stage we are not really concerned about it but would prefer to have an official uploader for complete distributions, rather than lots of partial uploads.

JERRIC> No Librarian here I can assure you 1) does not apply... Don't know about 2) but I can name a few who got it that way and DID "respond".

TONV&WILL> We appreciate those who do respond... Sooner or later all letters get answered unless they have fallen down behind the PE box.

JERRIC> Thanks

H-Brashear> I have to ask a question as long as we are on this subject.... and I'm a little sheepish about it, but...

TONV&WILL> go for it

H-Brashear> a little while back my former group the Western New York 99ers sent a rather large amount of money to you probably signed by the president Rick Simpson.... He was a little put out about the fact that this was never acknowledged and I'm... wondering if it ever got there?

TONV&WILL> I assure you this was not intentional... We can't remember off the top of the head whether we received it or not.... We ALWAYS reply to contributors as a matter of courtesy

H-Brashear> It would have been about \$200.00

Jeff W> Cash?

TONV&WILL> Sometimes our bank takes AGES to process overseas cheques. It makes us pay through the nose for them too

H-Brashear> No, Rick lives in Canada so he would have been wise enough to deal with it in the right way.

TONV&WILL> We'll have a dig in the paperwork later and check

H-Brashear> thank you

TONV&WILL> Canadian dollars are hell to get processed BTW

<Jeff W> Well, BarryB made his appearance.

<TONV&WILL> I noticed... quick in / quick out

EGERKEN> (cont of like last nite, eh Jeff?) BTW: Hi all

ERRVC> I find the FW loader very handy with EXEC on the 994A to load EAB programs ... Have you considered a version of this program alone tailored for this use?

TONV&WILL> This is the swiss army knife for the TI... You can cut the FWB package down to a minimum operating set of files and use this as a loader. We don't want little subsets brooding in corners... If you update one, you have to update the other as well... twice as much work...

ERRVC> I was thinking of a loader without the hardcoded Editor and Formatter choices.

Jeff W> What is the TI climate in Australia?

TONV&WILL> Pretty bleak... PC's are now so cheap that only the die hards who really appreciate the TI are sticking with it. The TI was a very good training ground for me.... and still makes an excellent intro to serious computing Ask a DEU user what a linking loader is !!! blank faces all round

TONV&WILL> Must be getting late over there... I notice a few dropping out from fatigue any more questions from the audience?

Ed> Tony, Will, great to have you here. Sorry I missed so much. But on my ?... In earlier versions of FW, you could invoke the file checker in a directory with a special keypress... where now it is automatic. Any chance of returning to the earlier way?

TONV&WILL> We removed that for two reasons :

- 1) It used code that would not work on the Geneve
- 2) It is necessary for the loaders It has been eliminated from SD in the editor

Jeff W> Too bad you don't have a Geneve to use.

Ed> It just takes awhile with long directories to read them all. GA

<TONV&WILL> We just stick to programming rules to keep Geneve compatibility Ed, the slowness is inherent in the TI system

Ed> (And in my case, the operator as well! :-)

Jeff W> Back to the TI users in Australia -- right now, there are two major hardware designers for new 99/4A peripherals in the U.S.: Asgard and BMS/WHT. Is there any new hardware that we should be aware of coming for the 99/4A from Australia? Or is that too much to expect?

TONV&WILL> Nothing current of note...

Jeff W> What about memory cards?

TONV&WILL> No... no memory cards that we know of

Jeff W> Harry Brashear, who was here earlier, reviewed the Quest RAMdisk in MICROpendium.

TONV&WILL> The Quest RAMDisk was the last project in the HUGG group

Jeff W> Is it supported by FWB? Can it work as CPU memory?

TONV&WILL> In so far as it is a well behaved TI device... It simply runs its own version of a ROS so it works fine

JEFFG> I want to thank Tony and Will for being on tonight.....

Jeff W> thanks to the new Internet connection, so we're now able to get more TIers into Delphi from outside the USA. ga

TONV&WILL> It was a pleasure

JEFFG> Thanks to Jeff W for setting this up! clapclapclap

ERRVC> Thanks much Tony and Will.

<Jeff W> Yes, thank you very much, Tony and Will. Hi, Beery.

<TONV&WILL> No problems... Its a nice summer here with good beaches....

<Beery> Hello, is the Conference still going, or did I just miss it?

<JEFFG> better late than never :-)

<Jeff W> It's still going, but pretty much opening up. Three hours of moderating more or less.

<Beery> What did I miss in a nutshell.

<TONV&WILL> I'll think of you all freezing over there while

I'm at the beach

JEFFG> <cold silence>

Jeff W> Hey, Tony, in the free ad sections, I've noticed advertisements for jobs in Australia? Is that for real? Are they good jobs? <grin>

<TONV&WILL> Worth getting out of the cold for

<Jeff W> Really?

<TONV&WILL> Just follow summer around the globe...  
Actually the job situation over here is rather bleak at best

Jeff W> So I should not believe what I read.

<TONV&WILL> Unless you are willing to work for no money

JEFFG> Gotta get some sleep, nite all. Don't get any sunburn on the beach!

<TONV&WILL> I already got sunburn

JEFFG> boooo

Jeff W> Australia has pretty good weather year round. I suppose.

<TONV&WILL> Yep... Fairly pleasant unless you live in the mountains

Jeff W> That's probably where all the jobs are.

<TONV&WILL> around here the minimum in winter is probably about 8 degrees celcius I think 4 degrees is the worst we've had

Jeff W> That's about 47 Fahrenheit. I think.

<TONV&WILL> thats in our city ( Newcastle )

Jeff W> If anyone wants to discuss computers, you are more than welcome.

<TONV&WILL> I guess we should close up this shop soon...

Beery> Can I ask if there is any new software coming from down under? (If I forgot, Hello Will and Tony).

TONV&WILL> What are the times in all your places at the moment?

Jeff W> Beery, do you know anything about the Amiga version of TIC?

TONV&WILL> Remind me... what is TIC?

Beery> No, contact big Al. I know it exists, as there was some discussion on it recently with him. TIC Full C

Compiler for MDOS on the Geneve.

Jeff W> Comes with assembler.

JEFFG> What you want from Al is the cross-assembler I think.

Beery> Assembler, linker/compiler/librarian/library files/and docs.

JEFFG> (to assemble 9900/9995 code on an Amiga)

Jeff W> Found the ad: AUSTRALIA WANTS YOU. Excellent pay, benefits, transportation. 1-407-292-4747 Ext. 1977. 9am-10pm. Toll refunded. Maybe I should call.

<TONV&WILL> Cross-assembler is what I'm after... Shame to waste a 68040

Jeff W> The TIC will use c99 libraries to compile code for the 99/4A as well.

JEFFG> I will send Al a message about your request (and others).

Jeff W> Beery, do you have any questions on SCSI? Will has his card now.

Beery> Not at this moment, except to ask if the DSR is finished? <grin>

<TONV&WILL> Does anyone know if we can mail into BIX from Internet?

Jeff W> Al Beard would.

Beery> I've been out of town and so busy the past 4 weeks I've just now caught up on previous orders, and I'll be busy to the end of February.

Jeff W> BTW, there is an MS-DOS version of TIC, too. So you can put your 486 to work as well.

TONV&WILL> That would be a development powerhouse... 68010 and 486

Jeff W> Hi, Walt Howe. Did JeffG wake you up?

Walt H> Yeah, he did. Hi all

TONV&WILL> hello

Jeff W> Here is the person to ask about Internet, Will and Tony.

<TONV&WILL> Does anyone know if we can mail into BIX from Internet?

Jeff W> Delphi, CIS, and GENie support Internet mail. I am not sure about BIX.

Walt H> I don't think BIX is connected ever, but even if I may be wrong

Jeff W> BIX is owned by the same people that own COMNET 6ULL.

TONV&WILL> I thought it was fairly restricted.. but I wasn't sure

ERR'IC> Walt Howe (who just joined us) runs the Internet SIG here on DELPHI.

Walt H> Their [BIX] access system, which is different from DELPHI's, doesn't support it easily. And I'm an old Tier 1, too

Jeff W> Any particular reason, Will, you want to know?

Walt H> Tony and Will got a check of mine once (grin) Beery> later, I'll catch the conference log.

Jeff W> Know someone to contact on BIX?

TONV&WILL> I just wanted to get some mail to an Amiga company in Carlsbad...

Walt H> KIP on the staff here spends a lot of time with BIX. Try him.

TONV&WILL> I just spend US\$3000 on their graphics board to become a developer

Jeff W> That's "kip@delphi.com" if you want to contact via Internet.

TONV&WILL> and snail mail is very slow

Jeff W> Carlsbad?

TONV&WILL> Carlsbad California

Jeff W> What is the name of the company?

TONV&WILL> Digital Micronics Inc.

Jeff W> I expect they are likely on CIS or GENie.

TONV&WILL> Nope... They said they are only on BIX in the Amiga developer section. BIX from australia is a rather expensive business

Jeff W> Delphi is inexpensive. But I'm not sure about Amiga support.

TONV&WILL> I'm getting onto the private Amiga developer Net in Aust soon I think they may be on that as well Jeff, what time is it where you are?

Jeff W> It is 00:51, Monday. I was thinking Don O'Neil

would be here by now. Walt, does Kermit work through Telnet?

TONV&WILL> I think I'll close up now... Catch Don via Email

Jeff W> Okay. Check the mail I sent to CDGUEST.

TONV&WILL> OK... will do... I'm getting rather hungry (haven't eaten today yet)

Jeff W> There is also a signup offer for 5 free hours on Delphi. If you wish to join.

ERR'IC> Kermit can work through telnet-- it all depends

TONV&WILL> thank you all for listening and providing stimulating convo

Walt H> You've got to be able to set up 8-bit operation in your local host

Jeff W> Also, if you have any questions about the SCSI card, let me hear them. Kermit needs 8-bit?

Walt H> If you're going to transfer binary files

Jeff W> I thought kermit translated binary files to 7-bit.

Walt H> Sorry, JeffW. I'm not sure of that-- I know it asks if files are text or not

Jeff W> To join Delphi, the username is JDINDELPHI and the password is SFREE.

Walt H> or use INTERNETSIG as a password (grin)

TONV&WILL> you can usually do a "set mode image" or similar to get 8-bit

Jeff W> Will that get you 5 free hours, Walt?

Walt H> I've used zmodem for binary files through telnet Yes. Jeff and Internet access during the 5 hours

Jeff W> Hmm... Could you work up a Delphi ad for me to post on the comp.sys.ti Internet newsgroup?

Walt H> Sure could!

TONV&WILL> ok... I'll leave you all to it... I captured the whole conference on the amiga for later reading....

Walt H> Look in your mail, Jeff

Jeff W> I've looked.

Walt H> Give me a few minutes (grin)

Jeff W> Will and Tony, have you had time to explore

Delphi?

TONY&WILL> I haven't explored very far yet.... I might look around a bit before I log off

<TONY&WILL> or maybe on delphi if I take up the SEREE offer

JERRY(C) Then YOU could be our official uploader (grin).

Jeff W> Okay. If it is not worth the ticket price, don't join. But we'd love to have you. And I am not sure how payment would work.

TONY&WILL> I'll seriously consider it... The payment will be difficult as the Uni get UEX, upset if it receives bills from such services

Jeff W> You would be billed, since you would get your own ID. You'd just have to access via the university or other gateway.

TONY&WILL> ok... bye all and thanks for attending...

<Jeff W> Thanks again, Will and Tony.

<TONY&WILL> - signed off -

again. "What a dope." Roger murmured. Then he cupped his hands around his mouth and hollered, "Choke it. Choke it!"

# Joke Of The Month

Flipping his hedges one afternoon, Roger waved to his dim-witted and luckless neighbor, who was mowing his lawn. Just then, the mower hit a rock, swerved out of control and fell into the swimming pool. The frantic fellow dived into the pool after it, becoming alarmed when his neighbor didn't come up for air. Roger rushed over to investigate. He leaned over the edge of the pool and spotted his friend at the bottom, pulling at the starter cord over and over
