HEADLAMP INSTRUCTION MANUAL

HOW TO USE

1. Battery Installation

Open the back cover, install the negative battery terminal to the spring, and cover the back cover.

2. Lighting Mode Switch

Touch the head switch to turn on the light source, re-press the switch to switch modes and turn off the light source. (After 10s in any mode, you can turn off the light directly)

BATTERY CHARGING

1. Open the waterproof cover located below the switch.
2. Plug the Type-c connector into the interface, turn on the power and the indicator light shows bright or flashing, charging begins.
3. When the indicator light turns green, it indicates the full charge.
4. Pull out the charging connector and cover with a waterproof cover.

BATTERY CAUTION

1. Built-in 18650 battery, to prevent product problems, please use the original charger for charging.
2. The product cannot be used while charging.
3. The natural discharge rate of lithium batteries will automatically release about 1% or less of power every day, if not used for a long time, the battery should be fully charged and recharged and discharged once in about three months.
4. Do not continue to use the product when the battery cover is severely damaged to avoid the danger caused by the short circuit of the battery.
5. Pay attention to the placement of products, should avoid heat sources and damp.
