Volume: 8- Ro:7

July, 1990

Next Meeting 7:00 pm, Monday, July 9, 1990 Nevada Power Meeting Room 6220 West Sahara Avenue

President's Message

by Rudy Johnson

Well, I had a good vacation while I missed the∞dune meeting. I am told that it went pretty well but not at the adversed location due to the strike at Nevada Power. The members who were at the meeting need to thank Cindy for hosting the meeting at her home as a last minute switch. I understand that the meeting followed pretty much the same course that the officers' meetings do - mostly talk and not much hands-on computer stuff. At times that gives everyone a chance to bring up topics that don't seem to fit the run of the typical meetings. And that gives a welcome change of pace. And once again Cindy is on for her demo of INENTIFILE. (Wonder how many times she has been on the schedule for that?) Also John M. has agreed to do a demo on sector editing. John has had a lot of experience with the topic recently with all the problems he has had with the BBS drives. He also suggested that anyone with had disks should bring the disk(s) to the meeting. John will try to make them usable again through Disk Craft - that DI' Black Magic. So bring In those bed disks.

Livill report that the BBS is back up and running on 2 hard of drives. Each is a 10-meg unit with one being used as a backup is 3 John doesn't have to pull his hair out if the first becomes corrupted. I expect that John will have a report on the BBS somewhere else in this issue.

I learned that the topic of elections was brought up at the meeting. It seems that my lackadaisical presidential style hasn't dimmed my luster in your eyes. No one seems to want a change of leadership for the 1990-1991 SRNG President. Well, as long as my possible nonattendence at future meetings doesn't bother anyone, I am willing to continue on if nominated and elected. (What ever happened to elections with opposition?) As far as I know the other officers (except for Bob B. for Treasurer) are also willing to continue in their present positions. Bo we have a member interested in serving as Ireasurer? I do know that become I, is interested in being relieved (at least occasionally) at the helm of the newsletter, from personal experience I know what he goes through every month in getting it together. Beorge deserves a big round of applause from each of us for a job well done this past year.

"Ihanks, George!" Now back to the elections. We should be having elections provided that we weet the requirements for attendence of the members.

In the world of II there is a item by John Willforth of the West Penn 99'ers that a member of his group has developed with a friend a hard and floppy controller for the II99/48. (No mention of Geneve compatibility.) The controller was built on a proto board and will be custom built on a card with the latest surface mount technology. The card is said to support all the common 5.25° densities and the 3.5° densities also. The price as of the announcement was \$225. The developers are setting up a company with the name of Electronic Systems. Bevelopment Corporation to produce the controller. Watch for future announcements.

Another item that needs to be mentioned is the other library items that SNUG maintains for the use of members. Lance Wilson spends some of his time in maintaining the newsletters that. SNUG-receives in the newsletter exchange program. Virtually all the newsletters that SNUG has received since the group's inception are maintained in envelopes. These go back for 7% years. There is a LOT of information and help in these on just: about any topic you care to bring up. The biggest draw back is: a lack of index so information needs to be culled out as you find it. The other items that SNU5 has started to acquire in the past couple of years are video tapes of presentation at other meetings. These also contain a large amount of help. [] ____! haven't looked at any of them other than what has been shown at 🔗 a meeting. Perhaps an index can be developed for these tapes. by those who look at them. As something of note is located the veiwer could note it on an accompanying index page. Subsequent viewers could find any of these items more quickly if they didn't want to view the entire tape. These tapes should be at the next meeting so keep them in mind and ask about them if you are interested.

Well, I have run out of time and George likes to get this before the very last minute so 1 11 end here. See you at the meeting (I better add, I hope!)

I had hoped to have a two megabyte, zero wait state MEMEX system up and running by now but, as luck would. have it: I will not receive the modification until this Saturday.

According to Bud Hills, there will be a small external box which plugs into the Geneve card with toggle switches to choose between zero and one wait state and BEITING REQUAINTED WITH ONE OF THE MANY FIELDS THAT HDDS or TI modes. The modification is designed in such 🐁 CANABE DONE WITH COMPUTER, HARDWARE, AND SUFTWARE a way that if the MEHEX should become disabled. It can so AVAILABLE NOW, AND THERE ARE MANY OTHER VAYS TO ENJOY be unplugged from the 9640 card and the Geneve will WE COMPUTING. THE GENEVE, DR.A HARD DRIVE, RANDISK, DR A function as it did before the modification. If there is "" (BETTER?) PRINTER? NEW AND IMPROVED SOFTWARE IS a problem, the ability to disconnect; will be a godsend as CONING BUT FASTER THAN WE CAN KEEP UP WITH IT. BUT to troubleshooting.

Although the NENEX modijust plugs onto the gate array & INE THAVE MEMBERS RANGING FROM BEGINNERS TO EXPERT, AND of the Geneve, it is far from a simple project. IF AMTHEY HAVE HARDWARE STARTING WITH THE BARE CONSOLE ALL memory serves, there are three traces to cut and six mathe way to the Latest on the market, whatever your jumper wires to attach on the 9640 card alone. My ≧# PRESENT STATUS #SNUG HAS A MEMBER SOMEWHERE IN YOUR CorComp floppy controller and both Horizon ramdisks 🚾 VICINITY. need to be modified with different chips and jumpers. and then we get to the MENEX card itself, which needs to 🖰 SO T. WOULD SUGGEST THAT THE BEST ANSWER TO THE be modulated and modified. This promises to be quite QUESTIBH COMES FROM PARTICIPATING IN SOUTHERN HEYADA and experience! Probably not a good one... Thank "USERS GROUP. THERE ISON CERTAIN AMOUNT OF TIME AND gommess our local electronics expert. John Nartin, or EFFORT INVOLVED INTREPING THE GROUP GOING AND THE wire be helping with (doing?) the project.

According to Bud I will have to go back to the old dual AUTOEXEC setup. One will initialize TIMODE and the other will not. This isn't as bad as it may seem since I used to run dual AUTOEXEC's before I bought the MENEX. I takeems odd that the 2 meg upgrade to MEMEX should complicate my system whereas the original 512K MEHEX simplified it by allowing TIMODE to be called all the time. I hope to have a glowing report of the advantages of the upgrade by next month's deadline. I just hope the glow isn't from my brain frying from frequent of TOO MUCH THERE IS ALVAYS, BIEBER, OR LEGNARD TO JUMP fruitrations...

<u>There is talk about competition for the Myarc HFBC card 10 PICK UP THE LATEST IN THE TI AND SENEVE WORLD.</u> from a company called EDI, ESDI, (some such): I had all the specifics about it in a log file from DELPHI but due to a randisk crash I lost the information. I believe the card will format disks from 90K to 1.44ME6 with a compatible drive along with taking care of support for four hard drives. Look for prices to be in the low to mid two hundreds and availability in July. (Hope I got that right)

PRESS has been SQUASHED. Chris Bobbitt, president of Asgard Software announce that press is officially on "hold" although he expressed doubt as to Charles Earl ever completing the project. He stated that the project was too complicated for any one programmer to finish. Beight has seen messages from Geneve owners prodding Aspard to complete a 9640 version of the program, but it doesn't look like memory constraints are the problem. Asgard is urging anyone who has paid for PRESS and who has not get received a refund to contact them.

LIBRARIAN'S COLUMN

by GEORGE CAMPBELL

EVERY SO OFTEN COMPUTER DUNERS ARRIVE AT A SORT OF CROSSROADS WITH THE MACHINE. OR PERHAPS A PLATEAU THAT

POSES THE QUESTION "WHAT NEXT?".

YOU HAVE SPENT SOME TIME (HOURS, WEEKS, OR MONTHS) THAT WHICH WHY NEXT?

. MORE THAT SUPPORT THAT ENDEAVOR, THE BETTER THE BENEFITS. WE WOULDN'T HAVE A SHUG TODAY, EXCEPT FOR THE WORK OF A FEW PERSONS THAT KEPT IT GOING IN HARD TIMES. WE HAVE ALL BENEFITED FROM THEIR DEDICATION, AND I FOR ONE APPRECIATE THEIR EFFORTS. BUT THEY DO NEED HELP IF HE ARE TO KEEP SHUG ACTIVE FOR THE NEXT YEAR.

THERE IS SATISFACTION IN BOINS THESE DIFFERENT OFFICES, AND THE PEOPLE WHO HAVE HELD THEN CAN LOOK BACK AND SAY "IT WAS WORTH THE EFFORT. IN AND SET THINGS STRAIGHT AGAIN (BLESS THEM). HER BESIDES- THOSE OFFICERS MEETINGS ARE THE PLACE TO

SO---- IF YOU ENJOY YOUR TI, SUPPORT S.M.U.G.

AS FOR THE LIBRARY - WELL I AM GOING AROUND IN CIRCLES RIGHT NOW. BIEBER HAD IT WELL CATALOSED AND ARCHIVED DOWN TO ABOUT SIXTY DISKS WHICH FIT INTO ONE BOX, BUT IN THE LAST 18 NORTHS THE LIBRARY HAS GROUN AND IS LARGER THAN SAID BOX. THAT DOESN'T INCLUDE GENEVE FILES AND A RIVER OF GRAPHICS THAT ARS AVAILABLE NOV. SINCE I DON'T HAVE A BENEVE (RIGHT NOV), WE NEED SOMEONE WITH THE GENEVE TO SET UP AND MAINTAIN A SEPARATE LIBRARY FOR THAT PURPOSE. AS FOR GRAPHICS, THERE ARE DOZENS OF PROGRAMS THAT MAKE OR USE THEN NOW, AND THOUSANDS OF ERAPHICS IN TEN OR MORE DIFFERENT FORMATS. I GUESS THE SOLUTION IS TO SET UP A SEPARATE BOX FOR GRAPHICS UNLY.

VELL - THIS LOOKS MORE LIKE A LECTURE . ITHAN A LIBRARY REPORT. SO I WILL QUIT HERE AND TRY HARDER NEXT MONTH

Secretary's Report

MINUTES for Monday June 11,1990....

This wonth due to a strike at the Power Company the meeting was moved to my home. We had a surprisingly good turnout.

Since John has been having problems with the new disk drive on the BBS, the meeting consisted of an informal discussion on whether to purchase a new or rebuilt drive, a 20mg or two 10 mgs using one as a backup drive.

There was also a discussion on various hard/floppy disk controllers. If you are thinking of upgrading to a hard dive you should have attended this meeting.

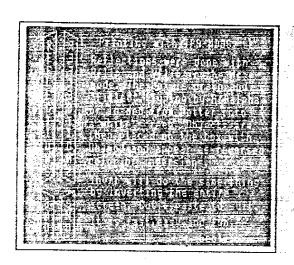

The time went by so quickly it was time to adjourn the meeting so my demo of Identifile was postponed till the July meeting.

At the Officers meeting June 25th John informed us that beorge Tilly found a 10 mg hard drive at a local store and that Bob Sherburne purchased another 10mg drive, so John and the BBS are in good shape.

At the July meeting I will finally demonstrate Identifile. John Martin will describe how to use a sector editor. This is one demo you should not miss. If you have a disk with a problem bring it to the meeting and possibly John can correct it.

July is election month for President, Vice President, Tresurer and Secretary. If you would like to run for an office or nominate someone you "HAVE TO ATTEND THE MEETING".

At the last SNUG meeting, the members voted to replace our 20-NEG hard drive which had quit working. After much discussion, we came to the conclusion that 2 TEN-NEG drives would probably be better than 1 20-NEG drive. The logic of this was that:

- We had only used up approximately 1 to 2 MEGs of our capacity on the 20-MEG drive during the 9 months we had it on line.
- There was no substantial difference in price between 2 10-ME6 and 1 20-ME6 drive.
- 3. It would be much easier to keep up-to-date backups of the ____885 using the second 10-886 drive rather than a large ____group of floppies.

(This is actually the most important reason.)

The day following the seeting, I left a message on the BBS to Bob Sherburne. I told him that the club had authorized me to get 2 new 10-MEG hard drives for the BBS. I also told him that I widn't have time to do it with my work schedule and asked him to look into it for me.

The next day, Bob left me a note on the BBS saying he had ordered a 10-MEG drive and that it should be here within a week.

En the following day, I got a call from Beorge Tilley. George had found an ad in a computer magazine describing 10-MES Segate drives for about \$69.00. This was a good price, but what was unique about the ad was that the phone number was from Boolder City. I asked George to check into it for me. He made the drive out to BC and found that they had sold all of the Segate drives, but they did have another brand (I don't remember the name) for the same price. He bought one for us and brought it over here for me. By the end of the day, I had it formatted and loaded up with all of the DBC files that I could recover from the old backup disks and the ones that I had been running during the down time.

Last weekend. Bub brought the drive that he had ordered (a TEAC SD510) over. After a few frustrating hours chasing that most elusive of "bugs". Operator Error, I finally figured out what I had done wrong. Once the program and drive were no longer hampered by my ineptness, the drive formatted perfectly and is now the official backup hard drive. I plan to alternate drives every once in a while to keep wear to a minimum on both drives. I will only have I drive at a time connected to the system except during backups. This should protect me from accidental erasures, and prolong the life of the backup drive.

This past week, a fairly simple question about RAMDISKS has sparked a debate of the relative merits of Ramdisks vs. Hard Drives. If you have been considering either, you might want to look at the message bases to see some of the comments. This is the kind of thing that our BBS is here for. If you have any questions or comments about the club or hardware/software (or anything else for that matter) just leave a message in one of the message bases. There are very few topics that won't get some kind of response from our users.

I aw going to start a new feature in this column. I will list the new uploads in the various sections (excluding the newsletter section). Listings will be in reverse order from New in the II section this month:

PIXCONVERT....version 1.3 of Jim Reiss' Pix viewer/converter LOCAL-BBS.....a list of local BBS numbers from Software City BBS.

PKESS......Announcement form Chris Bobbitt & Asgard
Software concerning the shelving of "PRESS"

BU-JANGLES....Mr. Bo Jangles. An XB musical salute to Samey
Davis Jr. MAGICFM3/1....Magic File Manipulator
3.1. Transfers files between the TI/GEMEYE on
which it is run to another directly connected
computer. All functions performed on connected
computer. Also has some file management
features. Runs ukp to 19200 baud.

New in the Geneve section this month:

-- July, 1990 --

TRI-AD....... Wayne Stith talks about the triad program. BY89 MATHPAD20..... Calculator program from Paul R. Bam which runs

TRIART......Advanced Rasic deam using triangles. See

FATCAT......Advanced Basic catalog program.

-PREBOUNCES?... BOUNCE 2... BOUNCE...:

acdes of the 9640. Just for fun!

JEFFCON......Delphi conference with Jeff White, Rom Walters and others regarding the future of 9640 hard and assessortware.

WINDOWCON.....Transcript of Delphi conference with Beery

CABLEVEA.....Article from the Toronto 979 UE newslletter
explaining how to connect multi-sync monitors to
Geneve and 80 column cards using 9938 wideo
chip.

JOHNSDATS.....A group of Batch files that Bob uploaded because
I lost mine when my Remdisk failed. (Bob is my
backup since I can't keep my disks organized)

NDISIER....... A couple of Advanced Basic programs that explore some of MESURNOISE...../ the sound and graphics capabilities of the 9640. Just for fun!

- New in the Computer Graphics section this month:

TIPSO3-RRK through TIPSO9-RSK:

because they got 'lost' when the old hard drive crashed. Thanks Bob!

BART..... A GIF format picture of Bart Simpson

As you can see, our BBS has a lot to offer. Why not give us a call? The number is (702) 648-1247. We are "open" 24 hours a day, 7 days a week (except during user group meetings, BBS failures, and updates). We support 300, 1200, and: 2400 baud. We are building up the various sections now that disk space is no longer a severa limit to what we can do. Expect to see many changes during the next few months.

See ya at the meeting.

-John-

The backup hard-drive is a refurbished full-height, 10mb MCL. The cost was \$69.00 plus \$4.14 tax. Purchased from Nevada Computer Corp. (has the same address and phone numbers as Mead Computer), 1000 Nevada Highway \$101. Bouldar: City, NY. They are mostly mail-order. Almost no displays. East to call (800) 654-7762 or (712) 284-0204. Neither number is listed.

SNUGLETter -- July, 1990 ----- page 5 Selected as a companion piece for John Martins's demo. (if you haven't blown a disk lately, try harder and bring one to the meeting.)

by WESLEY R. RICHARDSON *** BLUEGRASS 99 COMPUTER SOCIETY, INC.

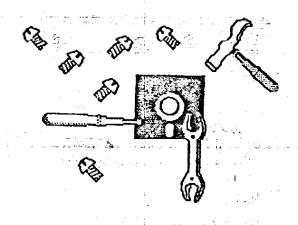

When you have a disk with several files that you have been working on and you do a catalog and it comes up DISKETTE IS BLANK, or DISK NOT INITIALIZED, it can be very frustrating. There are times when the sectors used and available get changed to Avalues like 2389 free and 7887 used, but you know you have a single sided, single density (SSSD) disk drive, with a maximum of 360 sectors. It is also possible to have a disk which will inote catalog, yet, when Extended BASIC is selected, the disk will run the LOAD program and continue without a problem of These have happened the find groups of four digits of HEX numbers such as to me and I am sure it has happened to others, so I thought I would document a way which may recover your disk for you.

7.7

erio. Espera

The items which you will need are your blown disk, two-blank disks, Disk Manager 1000 v3.5; Disko or Disk Patch, and a sector or track copier program, or the equivalent of any of the above. I will use the Funnelweb v4.10 DISK-PATCH for the sector editor.

- 1) The offirst step is to initialize a disk in the format which you believe the blown disk was, for example massSSD and Form the modisk name, ruse the name are that you want won the blown disk after it is a restored.
- Using the sector copier or track copier, make a copy of the blown disk. If you get a read error in sector 0, just tell the program to ignore the error. If you are unable to copy the disk with the copier programs which you have available, you may still continue the following steps—with theoriginal addisk, but be advised that you may lose everything on the disk; everything one
- 3) Load DISK-PATCH or DISKO and them insert the back-up copy of the blown disk in drive 1. Select option I for disk sector editor. Then disk 1, and sector 0. The screen should come up with the data from sector 0. Pressing FCTN 2 will - change the screen to ASCII and pressing FCTN 1 will change it to REX. In ASCII, the first ten characters will be the disk name. In HEX, at byte 12h (h=HEXADECIMAL) will be 01 for single sided and 02 for doubles sided. At byte 13h, will be 01 for single density and 02 for double density.
- 4) Press FCTN 4 to go to sector 001h. You should be

0002 0003 0009 0015 and so on. These indicate where the file names and file maps may be found. Write down each of these numbers in the order which they are found when read from left to right we and top to bottom on the screen. Note also if the first number is 0000, then the disk will catalog as being blank and no file names will appear.

- 5) Press FCTN 4 to go to sector 002h. In the first ten ASCII characters you will find a file name. Write this down next to the appropriate four digit number you had in step 4). Do this for each of the numbers from step 4). If there were several files on the disk, you may need to pressy. FCTN 9 and then option 1 again to go directly to the location. While in sector edit mode, pressing FCTN: 6 will take you to the next lower numbered sector.
- 6) You now should have a table similar to the one me below with the file name and location of each file on the disk.

0000	A-SECTOR2	0000	PACMAO
0003	CENTIPEDE SERVE	0005	PINBALL
0009	DEFENDER	0006	PINBALM
000A	KONG		POLE/POS
0008	KONH		POLE/POT
0004	LOAD	000E	TI/INVADER
000Ç	PACMAN - 5 - 1		

7) Note in the case that we did find a 0000 but a file was there, as in this case file A-SECTOR2 directory was located at sector 002h, then use the sector editor to view sector 001h Move the cursor to the first 0000 in HEX and change it to read 0002. Then press CIRL W to write the sector back to the disk, and answer Y to the question RE-WRITE SECTOR?

...DISK FIX

8) Remove the copy of the blown disk and insert the formatted blank disk in drive 1. Select the sector editor, giving drive 1 and sector 0. After the sector comes up, remove the blank disk and insert the blown disk copy in drive 1. Press CTRL W to rewrite the sector.

9) toad Disk Manager 1000 version 3.5 (DM1000), and then put the blown copy disk back in drive 1. Select option 1, File Utilities. Then select option 2 for Recover file. Give the drive as 1. Enter the first file name on you list and press enter. The program will say SEARCHING DISK, then RE-BUILDING LOST FILE, then FILE RECOVERED. Press enters and then 2 for Recover file. Repeat these steps until alloof the files are recovered.

10) Press 1 for Copy/Move/Delete... and give the disk number as 1. Your disk files should now be restored. If the disk free and used does not match up with the sum of the file sizes plus 2 sectors, then go to step 11), otherwise you are done.

ALPHABETICAL LIST OF FILE DESCRIPTOR RECORD.

correct. Place a D in the left column to delete all of the files and a U in the right column to unprotect all of the files. DM1000 will unprotect and then delete all of the files. At this point a catalog should show free 358, used 2 for a SSSD disk. Go back to the recover file section of step 9) and recover each file again.

One other piece of advise, if you have a disk with a bad directory, do not write any files to the disk until you have a chance to fix the directory. If you write a new file, then you are taking the Chance that part of another file will be over-written. This can happen because sector O may show that a location is free, when in fact it has part of a file in it.

The other advise is to always keep a back-up copy of anything which you do not want to lose. It is a good idea to keep a write protect tab on your master disk and keep it away from your work disk. On documents or programs, save your work to disk every 15 minutes so if the power goes off or your computer locks up, you only lose 15 minutes worth of work. Alternate saving to two disks when you have a large and important program or file.

If you always keep back-ups, I hope you will not need to use DISK-FIX, but if that time comes when the disk is blown, now you have something to try.

INVERTED and EROPPED (from p3)

🎨 The p3 original is difficult to read and there isn't time to redo when John starts the rup-- so, here's the inverse.

One of the interesting features of TPA is the ability to toggle Invrt, Mflip, and Vflip. It looks great on the screen but fine lines/characters den't printout exactly like the arm screen, especially in quad-density. I used the procedure described above to invert the 9640 Corner logo in this issue but the BBS logo has too much detail to invert. You can check the pixel-width with the Magnify command. Single pixel and widths will probably be a problem.

The July '90 issue of PC magazine's cover story is on Brabhical Word Processors (GPUs, of course). They call their feature article "Tomorrow's Word Processors Tuday" the orgraphical advantage". The five programs they cover list for from \$195 to \$595 with a guititude of fancy features like hyphenation and multi-level indexing. It takes 2.5 pages to cover them all but the truly suprising thing is the number **≈of** features covered that Mike McCann has included in his \$22.50 TPA-MDOS.

I've read a dozen reports from the last three large TI-Fairs totally ignored except for a one short paragraph in Berry Miller's (9640 News) review. He ends with "The Printer's Apprintice will probably be the leading page making program ... for the 9540. I highly recommend it. ". ... ay sentiments exactly, Berry.

New the equalizer - I've never run TPA on my 99-4A, just on the 9640 and John Martin tells me there is a world of difference. I've run Page Pro on both machines and it is a great program on either, but IPA is phenomenal on the Geneve.

to start planning for FEST WEST

Index

(NOTE FROM THE EDITOR: We have published programs from Walter Blood in the past. Your Editor thought this program was not only a good program, but a really good explanation of how to program. Walter Blood can be contacted at 2032 N. 32nd. St., Kansas City, KS 66104. Phone (913) 371-1092.)

The Gunning-Mueller Clear Writing Insti-

The Gunning-Mueller Clear Writing Institute developed a "Fog-Index" as a measure of clarity in writing. The Fog Index is roughly equal to the years of schooling required to read a piece of Writing.

It is simply the average sentence length plus the percentage of words having three or more syllables, all multiplied by 4/10.

A Mr. Nottingham tackled the problem of

programming the Fog Index. His efforts were a space since we are only concerned here with published by Creative Computing and it was word endings. Line 510 similarly by-passes reprinted in a book called "The Creative TRS" 520 to keep "le" from being rejected under published in 1983. Here is his approach. the final "e" rule.

Now how do you count the number of syllables in a word? Let us say that a syllable always has a vowel. The number of syllables equals the number of vowels. But wait a minute, how about the word pear? All right, we will not count double vowels; that is, two wowels in succession. Fine. How about the word piece? O.K. so we won't count final "e.s." Then consider "syllable". If we don't count the final "e", it would only have only two syllables. So we make an exception for "le", if it is the final "le".

We now arrive at the following theorem:

Any word having three or more vowels (a,e,-i,o,u,y) has three or more syllables if: Double vowels are counted as one and a final "ed" and a final "ed" are not counted except in the case of "ded", "ted", and "le". Now this theorem is not completely correct. It does't cope with double "ee" as in Whoopee! However, it is close enough for practical

: purposes.

The short program presented is liberally sprinkled with remarks, but at the risk of redundancy, an explanation is shown.

Line 220 begins input while line 280 puts it on the screen. Line 290 builds the

characters into a string. Line 330 detects the ASCII for "space" count words. Line 350 similarly counts sentences. Now the fun of counting syllables begins. Line 380 detects vowels and tentatively counts vowels. Vis incremented to detect double vowels. Line 460 decrements the syllable count for two consecutive vowels. Line 480 detects "ded" or "ted" and by jumping to line 510 by-passes 490 which rejects "ed". Note that the sub-strings must include

Now things get easier. Line 550 detects word endings via the ASCII for "space", tests for three or more syllables in the word and if found, increments the "long word" count. Line 580 resets the syllable count for the next word. Line 600 tests for 100 or more words (minimum size for an adequate sample) and stops at the end of the sentence.

Line 610 detects the ASCH for "ENTER"

and makes it possible to break off the testing before 100 words so that you may test the program or satisfy your curiosity. Line 620 coes back for the next letter. You will note that many things are happening between one character and the next. If you are a speed typist, you will have to slow down your pace. One note: Where a sentence has a clearly in-dependant clause, it should be treated as a separate sentence. Use periods to break it. into two sentences

INIBA(SID Version 8.0

More Features · More Power · More Flexibility

The best just got better... again. TI Base Version 3.0. With its massive file handling capabilities, extensive command programming language, and unmatched information processing facilities. TI Base is clearly the most powerful and flexible database system available for the TI-99/4a.

Overwhelming File Handling

TI Base supports up to five active databases. Each database can consist of 16129 records, with 17 fields per record, and 255 characters per field. Summed up, that's almost 70 megabytes of information! And using the generic conversion facility included, you can convert your present data files, from another database or TI Writer, to be used with TI Base. Now that's power... with almost no limitations!

Extensive Command Language

TI Base employs a database "engine" that is controlled by a procedural command language similar to the one used by Ashton-Tate in dBASE. The language consists of 50 different commands that allow you to access your databases on-the-fly, and create powerful program command files for automatic and complex data processing.

You can even produce your own database applications!

Unsurpassed Features and Support

No other database system offers you more features, power, or flexibility, in one single package, than TI Base. In addition, TI Base is the most widely used and supported database system available. Here's a short list of some of the outstanding features found in TI Base:

- Databases can be created, deleted, restructured (without losing data), and appended to one another. Records can be added, edited, deleted, sorted, and searched for in a variety of ways.
- Free interchange of data; numerical, character, date, and local variables may be freely interchanged.
- Complete mathematical functions; arithmetic, logical, trigonometric, and Boolean functions. Numerical fields may be independently summed and averaged.
- Formatted display and printing capabilities; character manipulations, screen scrolling, color changing, and more.
- Structured command language; over 50 different commands, local variable creation, ability to nest and files.
- Eight level nested sort capability; sort records on multiple fields.
 (TI Base is also fully compatible with TI Sort.)

- Database-driven Report Generator permits reports to be created, saved and later recalled when needed. Report headers, footers and bodies may be defined. Local variables may be used from within a report.
- Disk management functions; catalog and format disks, copy and delete files from within TI Base.
- 40 column file editor to create and edit your own command (program) files from within TI Base.
- Global processing of records using simple commands or complex command (program) files.
- Command files may be executed from any device, or installed and are run from high-speed VDP memory.
- System setup; allows the definition of disk locations, printer configuration, data stamping, and other misc. functions.

Not only is Ti Base powerful, but it is affordable as well. For only \$24.95 (plus shipping) you get the Ti Base system and tutor disks, keyboard overly, quick-reference card, and a comprehensive instruction guide. Ti Base requires a disk system, 32K memory expansion, and either an Extended Basic, Editor/Assambler, or Mini Memory cartridge to operate. Ti Base has been tested (but is not guaranteed) to be compatible with the Geneve 9640 (in GPL mode), all Myarc and CorComp peripheral expansion cards, and the New Horizon's RAMdisk.

Upgrade to Version 3.0

Previous owners of TI Base may upgrade to Version 3.0 for only \$14.95 (plus shipping). Anyone who purchased TI Base after March 31, 1990 is entitled to receive a free Version 3.0 upgrade. When ordering your upgrade, please include both of your original TI Base disks (the system and tutor disks) along with your upgrade fee. If you are entitled to receive a free upgrade, please include a copy of your dated sales receipt (free upgrades will not be shipped without a valid sales receipt). Please add the correct shipping charges to all upgrade orders (this includes "free" upgrades), otherwise they will be returned freight collect. All upgrade orders must be glaced by mail.

TEXAMENTS

Office: (516)475-3480 53 Center Street, Patchague, NY 11772 BBS: (516)475-6463

Please add \$3.00 for domestic first class (and Canadlan) delivery, \$8.50 for foreign insured air mail delivery. Orders are usually shipped within a 48 hour period. C.O.D. orders are accepted and must be placed by phone. Serry, no credit card orders accepted.

SOUTHEEN NEVACH USERS! ARTHR The SMUSLETter is published monthly by the Southern Nevada Users' Broup (SNUS). SNUS is a non-profit organization of individuals with an interest in all aspects of Texas Instruments! 99xx & 99xxx based computers including hardware and software by third party wendors. The GROUP weets 7:00 PA on the second Ronday of the wonth - currently in the Nevada Power Coppany, Wangart Community Heating Room.. 6226 West Schare Science. Visitors and guests are welcome to attend the meatings. Information on membership is available. at the meeting. Articles may be copied from the SMUSLETter provided credit is given to both the author and the original source and that the article not be used for profit. (For-profit organizations wishing to use any articles from the SHUGLETter will need to make prior arrangements with the Executive of the Southern Nevada Users' Group.)
