#### A WORD ABOUT YOUR ADDRESS LABEL

If there is an asterick before your name, your membership dues are due. If there are two astericks, your are seriously in arrears. Three astericks, and your mailing label ment in the trash instead of on your newsletter. Please keep your membership current.

#### PUBLICATION NOTICE:

THE BREAD BOARD is published monthly by the officers of THE TIDEWATER 99/4 USERS BROUF for distribution free to its members only. There are no subscription fees and not available for sale. Entered as third class postage at Brafton, Va. under permit No. 61. Reviews of products are the opinion of the contributing individual and may not reflect the views of the group, or its officers. A favorable review is not an endorsement, nor does the group, its officers and/or editors assume any liability for obsisting or unfavorable reviews. Contrasting opinions are solicited and will be published it accepable. Any rebuttal or contrasting view received and deemed unacceptable or not published due to space requirements, etc., will be acknowledged in the newsletter with information on how to obtain a copy (usually a return addressed envelope with proper postage.) Contributions in the form of reviews, articles, short original or public domain programs and/or classified items should be submitted to any club officer at any regular meeting (or within one week thereafter) for publication in the next newsletter.

P=K=Q=E=R=A=R N=Q=T=I=Q=E

Our program for June will be How to Enter an Assembly Language Program . . . by a non-A/L programmer. Barry Ensley has prepared this topic on how to use the Editor/Assembler package to enter, assemble, and debug Assembly Language programs designed to be called from the Extended Basic environment. This is not a tutorial on Assembly Language, but a demonstraton on just how easy it is to key in A/L programs and use them in Extended Basic programs.

If you have Extended Basic, Disk Brive, and 32K, you don't need to own the E/A package. All you need is the freeware program that is in the library. called FUNLWRITER.

#### NOTES FROM THE PRESIDENT:

Three topics: Last Saturday's get-together: treasury's status; and the breat Computer Versatility Challange and Public Exibition! The get-together hosted by our chapter on May 24th at the York tibrary on Rt. 17 marks the first occasion that the general membership of both chapters were in attendance since our unification. Ten were there from our chapter and four from Southside. We had three computers, our library and a lot of personal software. Lots of interaction

and a real good show.
As of Saturday seven old members have paid their dues, boosting our treasury to the point where we were able to pay Ken Woodcock for the disk drive we bought from him and which he installed so neatly in our FE box free of charge. Thanks for this bargain, Ken! As it now stands our treasury can support our share of the newsletter at the agreed \$40/sonth for the mensietter at the agreed \$40.000th for three more months. This means we need 36 more people to pay dues at \$10/year to stay solvent for the following 9 months, or an equivalent income. If you want to continue receiving the newsletter, please remit your dues. The cutoff date for our chapters is next month. If you can't attend a mention just and your dues to attend a meeting just mail your dues to the address on the front page 48AP. The Peninsula Chapter hereby extends an invitation to all persons not members of the Southside Chapter to join us, even if you do not live in our area. You can be a member and receive the newsletter for just \$10.

Back to an old theme for se. Believing that the 7199 is the most versatile of computers, I suggest that we hold in some public place such as a shopping mall The Great Computer Challange in which versatility is the criteria for a winner. This would require several (half dozen or more) II booths. It would also require the hest of our members ability in diverse fields **such as computer** arts and sciences as well as more practical applications such as business, school and home uses. Each ateam member should become expert in some publicly appealing demonstration to be on the Tidewater club's team. Maybe chapter teams could be formed to provide internural competition before we show the

rest of the world what Tidewater Effers can do. The purpose of all this effort is to promote the TIPP computer and our club and, incidently, increase the value of vour computer.

dim Trant

#### NOTES FROM THE VICE PRESIDENT

This month I have some good news and some bad news: the good news--1 intend to resign. You won't have to cut up with me after this month. I will be moving this summer and just won't have the time to properly devote to this office. The bad news (which helped bring this decision to a head) is the delay in this month's newsletter. At our get-together Saturday, May 24-the deadline for newsletter materials, in order to be printed and mailed by Wednesday--i had received none of the officers resorts from neither chapter nor any reader contributions. The monthly Tips from the Tipercub had not been received, and it seems the correspondence we sent out duing the cest two months had been ignored. This included two letters to both TRITON and TENEX. We had PACE given us on our efforts to get a recly from UNISCOURCE and solisited outside help from the proper authorities, and even here we have received no reply. For one with ulcers and supposedly living in a stress-free environment, this is an added agrivation I can live without. I co wish to express my appreciation to everyone who has made sudoestions, contributed time and effort in service on committees to get it all together. Thanks and apoplogiës are offered this month to Graig and Sue Miller of Miller Eraphics—thanks for the use of the video tape, and appologies for not getting to our mailbox more fra-quently, requiring a second mailing.

#### SECRETARY'S PEPDRY

It seems between Jim and Don, everything needed saying has been said! Mav's meeting was called to order by the president promptly at 7:30 p.m. May 13. Minutes of the last meeting and treasurer's report were accepted as appeared in the newsletter. While May was our membership month, we only had five members pay their annual dues, with a couple of more making the payment at the get-together held Saturday, May 24. Poth meetings were a success, with winners of the door prizes including Barry Ensley (a box of ten disks) Ken Modocock (book titled "How to Feel at Home with a Home Computer"). Jim North (a book on Trivia Data Base, and a TI User's Buide was won by Allen Leibrand. Everyone who attended was a winner of a good time! For our regular meeting, we were treated to a video cassette featuring the

Graham Kraxer. We now have a PE box with cisk drive and hope to see some growth in our software ligrary. There have been a number of FAIRWARE programs about in the past few months.

Earl Andrews

#### T-E-L-E-C-0-M-M-U-N-I-D-A-T-I-D-N-B

There are many of you out there with experience in the use of your II to talk with the outside world. Trading programs with others, chatting on a buliten Soard or signing on to an information retrival service such as Comp-U-Serve. The Source SEnie. Viewtron. MCI Mail. and others that are added regularly for example, is not new to you. But for some, the only "action" we get out of the computer is what we load into memory by means of tabe, disk drive or module. This cast month I learned of an offer by DITIBANK of a \$50 or \$100 rebabe on a HAYES Modem if you sign up for their banking service That's right! You be longer have to go to the meanest Bank Macrane or call the customer service department for your balance, or transfer funds). You may co your banking and senage your accounts with your stock broker right from your TI-99/4 console. They may have a ways to of to get the cesh edvances to come out of the speech synthesizer, but with being able to direct payment to arvone you desire, who needs the presncacks? I checked with most of the local bases and none of them offer this service (yet), and morth Carolina Mational Bank of Charlotte save they have discontinued it elready. If this shounds like something you would like like to persue, or more information, you may call the following:

> SERVICE HAAK 900 FHONE No

BANK ONE CHASE MANHATTAN CHEMICAL BANK CITIBANK APPLAUSE SOC SPECTRUM PRONTO DIRECT ACCESS 800-148-1547 522-7766 782-1100 633-1186 448-1188 MF5. HANCVERS

Fees for the service vary as do the services offered. Some tanks even have optional services available including brokerage accounts. The offer for the modem ands this month, so if you've cash waiting for the right time to get on line with the world, don't cass this one by. Call any of the above banks (or you may find some I missed) for the service that meets your needs. I will crimp the brochures I received to the meeting\_end brochures i received to the month of Enie and some printouts from the TI FORUM of Communication of Ken Silver. If you haven't sampled GEnie you may so so by calling 1-800/635-6369 and typing "HHH" when connected. Then use the case-word "XJM11999,5ENIE" at the "U# scoopt. Another service vou may not be familiar with is FC Persuit. If you are spending more than \$25 a month in long distance on one calls with your favorite BES or database, they may save you money. call to their customer service at 1-800/368-4215 during business hours will get you complete information.

Don Andrews

There must be something big going on at the Southside meethings that they are trying to keep secret. The only report we have from them this month is a treasurer's report. At least they've found a way to keep the revenue coming in with no reported expenses. Now that's something we all need to take lessons in! Seriously, a lot of members may have been unable to attend as well as the members of the Pennsula Chadter, and other User Groups with whom we trade newsletters are really interested in sharing our progress. How about it? —Ed

#### NOTES FROM ANDNYMOUS

You hav remember my telling you previously about by studid son-in-law. Well. the munit he will praduate from college. He's getting a 5.5. degree in journalism: I told him my limited experience in this field has been in writing short articles for this newsletter, but that was enough to know they picked the appropriate make for his secree.

#### 

#### DON'T DRINK & DISK DRIVE

By Feter H. Lewis N.Y. Times News Service

All sorts of strange things can happen to a personal computer system in the summer. Of course, strange things have been known to happen to computers all year round, but summer brings its own seculiar hazards, among them excessive heat and dust, and even dripping ice cream comes and marauding ants.

There are may steps one can take to reduce the risk of seasonal disaster, at leastas far as computers are concerned. Make or buy dust covers for the computer monitor, and printer, and get in the habit of using them whenever stepping away from the system for more than a few hours. Avoid materials that are conductive to static electricity.

There is often a strong temptation in the summer, even in air conditioned homes, to fling open the window to let in a little fresh air and sunlight. Fresh air, aspecially in such rongested urban areas, can waft dust, grime and other effluvia that can be lethal to a delicate computer system. This is one reason many companies keep their big computers in special rooms with humidity and temperature controls and advanced air filtration.

Dust covers also provide a shield against solashes and drips. Many people develope a habit of outling a cup of coffee, can of soda, or beaker of mint juless on the desk while working with the computer. Some even use floopy disks as coasters, or balance drinking glasses precaricusty atop a disk grive, beside the keyboard, or on an overhead shelf. Fause right now to consider what a glass of lemonade to do if it is accidentally upended into any part of the computer system. It isn't a pretty sight. Don't drink and disk drive.

If drinks containing sugar are spilled onto the keyboard or into the microcircuitry, take the equipment to a computer repair shoo for cleaning. Even the smallest patch of missed sugar can degrade the microcircuitry.

Dust can be insidious. It builds up gradually, causing no apparent problems until the accumulation overcowers the system. Disk drives ar most susceptible. in part because the computer's cooling fan draws air into the most delicate and unseen parts of the machine. A speck of dust in a disk drive will always seek out the most important files and destroy them. Regualr vacuum cleaning, coupled with a few shots of compressed air, is preferabe to dusting (which just stirs the contents around). A vacuum attachment that can direct its suction into relatively small places, such as between keys, is handy, but too strong a vacuum can suck up the keys as well. The small battery powered models are handy. A canister of rompressed air can be bought for a few dollars at many computer or photography shops.

Heat is another computer killer. Keen the computer out of direct sunlight, and that goes for floopy disks as well. High room temperatures can fry a computer's, circuitry. An electric fan ran help root the roomuter if a room air conditioner is not practical, but again, avoid blowing contaminants toward the machine. /If you must work in a warm room turn the computer off periodically to let it cool.

Some people temot disaster by plugging the air-conditioner into the same outlet as the computer. The frequent power dips caused by the compressor's voracious appatite for electricity can batter the computer's circuits and cause data loss. If the overhead lights dim or flicker when the air conditioner kicks in, the computer is certainly taking a beating and expensive repairs are inevitable. Invest in a good surge suppressor and plug the computer's namer rable into it. Bood suppressors guard against sudden power fluctuations, and the cost is small compared with the potential repair bills. Summer thunderstorms can also invade a computer's power supply, when the weather turns nasty, be more diligent about making backup copies of important files.

99/48 National Assistance Group (which is a commercial enterprise, not a user's group, although they charge a fee to ";oin"), sells public domain programs at \$3.89 each - but you individual can't order programs, you have to buy a package deal.

I sell good copyrighted programs, written by myself, for \$3.88, I let you pick and choose, even just one program if you want. I don't pretend to be a user's group (I know that Tigercub often gets misspelled as Tiger Club but I can't help that!), and I don't charge you to "join".

The reason for these remarks is that one of the public domain programs cold by that group is listed as SAMARKAND. It may be only an odd coincidence that I wrote a random music composer entitled SONG OF SAMARKAND and out it in aublic domain because I didn't think it was worth selling. Anyway, if you want it. here it is. 188 CALL CLEAR 118 REM - SONG OF SAMARKAND programmed by Jim Peterson -

Here is a very ingenious idea published in the Corpus Christi U6 newsletter by H. Macdonald. He could not find the author/newsletter which gave him the idea, so if you know, tell me and I'll print due credit.

I have modified it a bit. This short routine will load quickly and enable you to bypass loading and running the Menu Loader program on a disk when you already know the filename of the program you want to run.

Save the Menu Loader under the filename MEMULOADER and save this routine under the filename LOAD - be sure to save it before you try it, because it erases itself! 188 CALL IMIT :: CALL LOAD(-31886,16):: DISPLAY AT(12,1) ERASE ALL: "RUN MENULOADER? ( Y/N)"

118 CALL KEY(3,K,S):: IF S=8
THEN 118 ELSE IF K=78 THEN
138 ELSE DISPLAY AT(12,1)ERA
SE ALL: "LOADING MENULOADER"
:: RUN "DSK1.MENULOADER"
138 CALL CLEAR :: CALL LOAD(
-31952,55,215,55,215):: END

Here is one with a bit of

A computer without a program is like a car without gas. If everyone who filled up at a self-service pump drove away without paying, how soon would all the gas stations be closed?

MEMORY FULL!

Jie Peterson

#### COMPUTER ETIQUETTE By Mel Morth

The following are a few points of general BBS etiquette. If you wish to maintain your welcome on whatever system you happen to call, it would be to your advantage to observe these few rules.

- 1. Don't habitually hang up on a system. Every SYSOP is aware that accidental dis connects happen once in a while but we do get annoyed with people who hang up every single time they call because they are either too lazy to terminate properly or they labor under the mistaken assumption that the ten seconds they save online is going to significantly after their phone bill. "Call Waiting" is not an acceptable excuse for long. If you have it and intend to use the line to call BBS Systems, you should either have it disconnected or find some other way to circumvent it.
- 2. Don't do dumb things like leave your self a message that says, "Just testing to see if this thing works". Where do you think all those other messages came from if it didn't work? Also, don't leave whiney messages that say, "Please leave me a message". If ever there was a person to ignore, it's the one who begs someone to leave him a message. If you want to get messages, start by reading the ones that are already online and getting involved in the conversations that exist.
- 3. Don't use the local equivalent of a chat command unless you really have some clear cut notion of what you want to say and why. Almost any SYSOP is more than happy to answer questions or offer help concerning his system. Unfortunately, because about 85% of the people who call want to chat, and about 97% of those people have absolutely nothing to say besides, "How old are you?", or something equally irrelevent, tever SYSOPS even bother answering their pagers every day.
- 4. When you are offered a place to leave comments, when exiting a system, don't try to use this area to ask the SYSDP questions. It is very rude to the other callers to expect the SYSDP to carry on a half visible conversation with someone If you have a question or statement to make and expect the SYSDP to respond to it, it should always be made in the section where all the other messages are kept. This allows the SYSDP to help many people with the same problem with the least amount of effort on his part.
- 5. Before you log on with your favorite psuedonym, make sure that handles are allowed. Most SYSOPs don't want people using handles on the system. There is not enough room for them, they get silly games of one-upmanship started, it is much nicer to deal wint a person on a personal basis, and last but not least, everyone should be willing to take full

responsibility for his actions or comments instead of slinging and from behind a phony name. When Signing on, why not sign on just like you would introduce yourself in your own society? How many of you usually introduce yourselves as JOE N. SMUTZ the 3rd or 4th?

- 6. Take the time to log on properly. There is no such place as RIV, HB. ANA, or any of a thousand other abbreviations people use instead of their proper city. You may think that everyone knows what RIV is supposed to mean, but every BBS has people calling from all around the country, and I assure you that someone from Podunk lowa has no idea what you're talking about.
- 7. Dont go out of the way to make rude observations like, "Gee, this system is slow". Every BBS is a tradeoff of features. You can generally assume that if someone is running a particular brand of software, that he is either happy with it or he'll decide to find another system he likes better. It does nobody any good when you make comments about something that you perceive to be a flaw when it is running the way the SYSOP wants it to. Constructive criticism is somewhat more welcome. If you have an alternative method that seems to make good sense, then run it up the flagpole.
- 8. When leaviing messages, step and ask yourself whether it is necessary to make it private. Unless there is some part— icular reason that everyone shouldn't know what you're saying, don't make them private. We don't call them Public Bulletin Boards for nothing, folks. It's very irritating to other callers when there are huge blank spots in the messages that they can't read and it stifles interaction between callers.
- 9. If your favorite BBS has a time limit observe it. If it doesn't, set a limit yourself and abide by it instead. Don't tie up a system unnecessarily as a new user and run right to the other numbers list. There is probably very little that is more annoying to a GYSOP than to have his own board completely passed over by you on you way to another board.
- attention to ment passes in front of your face. When a BBS dsiplays your name and asks "Is this you?", don't say yes when you can see perfectly well that it is mispelled. Also, don't start asking questions about simple operation of a system until you have thoroughly read all of the instructions that are available to you. I assure you that it isn't any fun to answer a question for the tho usandth time, when the answer is prominently displayed in the system bulletins or instructions. Use some common sense when you ask your questions The person who said, "They's no such thing as a stupid question", obviously never operated a BBS.
  - Don't be personally abusive. D&D

It does not matter whether you like a SYSOP or think he's a jerk. The fact reamains that he has a large investment in making his computer available. Usually out of the goodness of his heart. If you don't like a SYSOP or his system, just remember that you can change the channel any time you want. Besides, whether you are chare of it or not, if you make yourself enough of an annoyance to any SYSOP, he can take the time to trace you down and make your life, or that of your parents, miserable.

12. Keep firely in mind that you are a guest on any BBS you happen to call. Don't think of logging on as one of your basic human rights. Every person that has ever put a computer system online for the use of other people, has spent a lot of time and money to do so. While he doesn't expect nonstop pats on the back, it seems reasonable that he should at least be able to expect fair treatment from his callers. This includes following any of the rules for eystem use he has laid out without grumping about it. Every SYSOP has his own idea of how he mants his system to be run. It is really none of your business why he mants to run it the way he does. Your business is either to abide by what he says, or call some other BBS where you feel you can obey the rules.

The following is a list of BBS on the Peninsula. If you know of others, and have found them of value, let us know and we will publish them.

## BASICALLY BASIC: ROM NEWSLETTER by Newt Armstrong

Relational Arithmetic WOS brought forcibly to my attention when my brother AL (Southwest 99'ers, Tucson) used it improving one of my programs. Both Jim Swedlow and Joe O'Brien have written of it in ROM, and I'd it used in programs and alluded to in other publications. [Read page II-14 in the User's Reference Guide. ] But I had never really understood its versatility. Now, let me take a crack explaining this important part of Boolean's Algebra.

The relational expression A=A is true and A<>A is false. For use in a computer, true is assigned the value 1 (-1 in the TI) and false is assigned 0. these arithmetic values are very useful in programming. an example, in the development of a date-printing routine to illustrate nested for-next loops, the program had evolved to:

100 DATA JAN, FEB, MAR, APR, MAY, JUN, JUL, AUG, SEP, OCT, NOU, DEC 110 CALL CLEAR 120 FOR M=1 TO 12 130 READ M\$ 140 PRINT, M\$ 150 NEXT M 160 STOP

The next step is adding the day of the month, and the obvious statements are:

136 FOR D=1 IO 31 140 PRINT ,M\$;D 146 NEXT D

But wait! With RUN, the ensuing printout will show all months having 31 days, and we all know 30 days hath Sept., etc... We can add 131-135 and change 136 thusly:

131 DM=28 132 IF M=2 THEN 136 133 DM=30 134 IF (M=4)+(M=6)+(M=9)+(M= 11)THEN 136 135 DM=31 136 FOR D=1 TO DM

thereby using the true/false characteristics of relational

expressions in the IF/THEN statements. i.e.,

--134: If M=4 is True OR If M=6 is True OR If M=9 is True OR If M=11 is True, Then Goto 136; Otherwise, Goto 135.--

But the five additional statements can be reduced to one using the arithmetic values of these same expressions. Eliminate 131-135, leave the change in 136, and add:

134 DM=28+-3\*(M<>2)+(M=4)+(M=6)+(M=9)+(M=11)

Statement 134 is a LET. (Read page II-45 in the <u>User's</u> <u>Reference Guide.</u>) LET DM equal 28 plus -3 times 1st RE (relational expression) plus 2nd RE plus 3rd RE plus 4th RE plus 5th RE.

Becouse they are parentheses, relational operations are first, performed to get orithmetic values. Then orithmetic operations performed in their normal order, \* -. CRoad 11-13, page paragraph one in the User's Reference Guide.)

An evaluation of the LET statement for the 12 possible values of M is shown below.

```
М
   28+-3*RE1+RE2+RE3+RE4+RE5=(DM)
1
   28+-3*-1+0+0+0+0=31
2
   28+-3* 0 + 0 + 0 + 0 = 28
3
   28+-3*-1+0+0+0+0=31
4
   28+-3*-1+-1+0+0+0=30
5
   28+-3*-1 + 0 + 0 + 0 + 0 = 31
6
   28+-3*-1 + 0 +-1 + 0 + 0 = 30
7
   28+-3*-1+0+0+0+0=31
8
   28+-3*-1 + 0 + 0 + 0 + 0 = 31
9
   28+-3*-1 + 0 + 0 +-1 + 0 = 30
   28+-3*-1 + 0 + 0 + 0 + 0 = 31
10
   28+-3*-1 + 0 + 0 + 0 +-1 = 30
   28+-3*-1+0+0+0+0=31
```

Notice that negative logic is used for the 1st RE. The false value, 0, is returned when M is 2. and the true value, -1, is returned for all the other months. These values multiplied by -3 (giving 0 and 3, respectively) are added to 28 along with the -1s and 0s from the other REs to make DM contain the correct number of days for each month... except in a leap year, and that's another column.
