

Introducing CC Gold

Thank you..

for your purchase of CCGold and your continued support of Circuit Cellar.

CC Gold contains copies of Circuit Cellar magazine starting with the very first issue through the most current issue in print at the time of purchase.

Issue PDFs are located in the Issues directory.

Project files (code files, additional schematics, etc.) for the articles are located in the Project_Files directory.

Project files are sorted by year and then by issue. Files for the more recent issues (starting around mid 2000) are filed by author name-issue#.zip format.

To search for a keyword or phrase, use the full search function found in Acrobat Reader. This function will allow you to select all the PDFs found in the Issues directory and run a customized search on the full list of issues.

To view a simplified Table of Contents for all issues, open file CCToC.pdf found in the root directory of this drive.

You can easily keep your CC Gold archive up to date by purchasing subsequent issues from our website or by downloading issues and code with a Circuit Cellar Digital 2.0 Subscription. Simply download and save your NEW Issue PDFs straight to the drive, taking care not to overwrite current content.

Circuit Cellar is not responsible for user error that corrupts, erases or destroys the content contained within this drive at time of shipping.

The contents of CC Gold is copyrighted material. Copying and distribution for reasons other than your own personal use is illegal. Copyright infringement causes direct harm to the people who work hard to bring you Circuit Cellar.
