Guillaume,

I don't understand (not unusual for me). How are you trying to
load the E/A cart image? Do you have a gram device?

I have on one volume a LOAD program that displays:
"TEXAS INSTRUMENTS
COMMAND MODULES #9"

"GLP INTERPRETER SIMULATION"

And below a list where "Editor Assembler" is present.
If I select it, the computer reboots and on startup I have:
"1 : TI BASIC
2: TI EXTENDED BASIC
3: Editor ASEMBLER"

And I can run the last as if I had the cart.

Guillaume.
